

Workshop with Client

Date: 1/1/2022

Time: 9am-10am ET

Client team: Compliance Lead, Finance Lead, ERP Program Manager, IT/Security Lead, Internal Audit Lead, and Regional Process Owners

PWC team: Engagement Manager, Risk and Controls Consultant, ERP/SAP Specialist, Security and Access Management Specialist, and Business Analyst

Intro (5 min): Manager introduces the team, and each member shares a quick intro on their experience in the compliance/risk space and the integration with digital solutions.

Background (5 min): Manager goes over the goals of the workshop and what the team hopes to gain by the end of the session.

Questions (40 min)

1. What are the main business reasons for upgrading the ERP system at this stage?
2. What are the biggest problems with the current ERP or local systems across the four regions?
3. Which business processes are most affected by the current system limitations?
4. What compliance or SOX-related challenges are you facing today?
5. What systems, tools, or manual processes are currently used to manage compliance and controls?
6. How are user access rights, roles, and approvals managed in the current ERP environment?
7. What are the main risks you want to reduce through the ERP upgrade?
8. Which controls are currently manual, and which controls are already automated?
9. What reporting or visibility does leadership currently need but does not receive easily?
10. What are the key requirements you expect from the enhanced ERP or compliance system?
11. Who are the main stakeholders involved in compliance, security, finance, IT, and business process ownership?
12. What would a successful ERP upgrade look like for the business, compliance team, and leadership?
