

Phase 2 Logical Data Relationship Diagram

Official Website and Customer Enquiry Management System for a UK Auto Parts SME

	Details
	Auto Parts SME
	Phase 2 Future Enhancement
	June 20XX
	Business Analyst
	Define a logical data relationship view for enquiry and sales lead tracking before SC design.

Note: This is a logical BA-level diagram. It is not a final physical database design. Final table structure, indexes, keys, data types, security rules, and retention rules should be confirmed by the technical team and relevant business/compliance owner.

1. Diagram

The diagram below shows the proposed logical relationship between customer enquiry data, quote requests, product categories, lead status, follow-up notes, enquiry source, and newsletter subscription data.

Phase 2 Logical Data Relationship Diagram

Customer Enquiry and Sales Lead Tracking Dashboard - SQL and Power BI Future

2. Logical Entities

	Business Purpose
	Stores basic customer contact details captured through enquiry, quote, feedback, or contact form.
	Stores the main customer enquiry record submitted through the website.
	Stores additional quote-specific details such as product category and vehicle details.
	Stores the agreed auto parts categories used in enquiry and reporting.
	Stores lead progress such as New, Contacted, Quoted, Won, Lost, or Closed.
	Stores business follow-up notes and next action dates for each enquiry.
	Stores where the enquiry came from, such as website quote form, contact form, feedback form, or newsletter.
Subscription	Stores newsletter consent and unsubscribe status.

3. Relationship Summary

	Meaning
Customer	One customer can submit many enquiries. Each enquiry should belong to one customer. Customer contact details are available.
Newsletter Subscription	One customer may have one or more newsletter subscription records depending on their subscription and unsubscribe history.
Enquiry	One enquiry source can be linked to many enquiries for reporting by source.
Quote Request	One enquiry may become one or more quote requests where the customer asks for a quote and a product availability response.
Product Category	One product category can be selected in many quote requests.
Status	One enquiry can have multiple status updates during follow-up.
Follow-up Note	One enquiry can have many follow-up notes.

4. BA Validation Notes

	BA Note
	Customer name and email should be captured for quote and contact enquiries where the enquiry is submitted through a form.
	Consent flag should be captured for forms where personal data is used to respond.
	Lead status values should be standardised to avoid reporting mismatch in Power BI reports.
	Product category values should match the approved website categories.
	Follow-up notes should include follow-up date, next action date, and owner where applicable.
	Fields should support Power BI metrics such as total enquiries, quote requests, top enquiries, follow-ups, conversion rate, and monthly trend.
