

Non-Functional Requirement (NFR) Document

Official Website and Customer Enquiry Management System for a UK Auto Parts SME

Field	Details
Client Name	Auto Parts SME
Project Name	Official Website and Customer Enquiry Management System for a UK Auto Parts SME
Document Type	Non-Functional Requirement (NFR) Document
Prepared By	Business Analyst
Working Date	18 May 20xx
Sprint	Sprint 1 Website Foundation
Version	v1.0

1. Purpose

This document captures the non-functional requirements for Phase 1 of the website project. Non-functional requirements describe how the website should perform, behave, respond, protect customer data, and support users across devices and browsers. This document supports Sprint 1 and later testing activities.

2. Scope

The scope covers the Phase 1 website MVP: Home page, About Us, product categories, Request a Quote form, Contact Us page, Feedback form, newsletter subscription, footer links, legal information pages, responsive design, basic Search Engine Optimisation (SEO), basic analytics if agreed, email notification, testing, User Acceptance Testing (UAT), and release readiness.

3. Out of Scope

Customer login, online payment, full e-commerce checkout, live inventory, customer dashboard, complex admin portal, mobile app, Application Programming Interface (API) integration, SQL database, Power BI dashboard, and advanced recommendation engine are out of scope for Phase 1.

4. Non-Functional Requirements

The table below lists the key non-functional requirements for the Phase 1 website MVP. These requirements should be reviewed with the Product Owner, Business Owner, Developer, UI/UX Designer, QA Tester, and relevant advisor where required.

NFR ID	Category	Requirement	Acceptance / Measure	Priority	Owner / Confirmation
NFR-01	Responsive design	Website should display correctly on desktop, tablet, and mobile screens.	Pages should be readable and usable on common screen sizes without horizontal scrolling for normal content.	Must	UI/UX Designer, Developer, QA Tester
NFR-02	Browser compatibility	Website should work on commonly used modern browsers.	Basic checks completed on Chrome, Edge, Safari, and Firefox where practical.	Must	Developer, QA Tester
NFR-03	Performance	Key pages should load within a reasonable time for a small business website.	Target page load time should be agreed during testing. Heavy images should be compressed before release.	Should	Developer, Product Owner
NFR-04	Availability	Website should be available to customers during normal business operations.	Hosting and domain setup should be confirmed before release readiness review.	Must	Business Owner, Hosting Support
NFR-05	Security basics	Website should use secure HTTPS connection and avoid exposing customer form data unnecessarily.	HTTPS enabled. Form submission behaviour reviewed before go-live.	Must	Developer, Business Owner
NFR-06	Privacy and data protection	Website should provide privacy information for forms collecting personal data.	Privacy page/link available before go-live. Final wording confirmed by Business Owner or relevant advisor.	Must	Business Owner / Relevant Advisor
NFR-07	Cookie handling	Cookie notice or preference approach should be included if analytics or non-essential cookies are used.	Cookie requirement confirmed before analytics or tracking tools are enabled.	Must	Business Owner / Relevant Advisor
NFR-08	Newsletter consent	Newsletter subscription should use clear consent and include unsubscribe expectation.	Subscription wording and unsubscribe handling confirmed before go-live.	Must	Business Owner / Content Owner
NFR-09	Accessibility basics	Website should follow basic accessibility expectations for readable text, alt text, labels, keyboard use, and clear errors.	QA checks basic readability, labels, error messages, and navigation before UAT.	Should	UI/UX Designer, QA Tester, BA
NFR-	Usability	Website navigation and forms should	Users can find categories, Request a	Must	BA, UI/UX Designer,

Anonymised BA portfolio sample. All identifiable client details have been removed or replaced.

10		be easy for customers to understand.	Quote, Contact Us, and Feedback without confusion during UAT.		Product Owner
NFR-11	Form validation	Forms should validate required fields and show understandable error messages.	Mandatory fields cannot be submitted blank. Error messages explain what customer should correct.	Must	Developer, QA Tester
NFR-12	Email notification	Quote and contact form submissions should notify the business email inbox.	Test submission sends notification to approved business email address before UAT sign-off.	Must	Developer, Business Owner, QA Tester
NFR-13	Content accuracy	Customer-facing claims should be accurate and approved.	Claims such as free shipping, secure payment, money back, discount, or support availability are approved or removed.	Must	Business Owner, Content Owner
NFR-14	SEO basics	Pages should include basic Search Engine Optimisation support.	Page titles, meta descriptions, headings, image alt text, and clean URLs reviewed before release.	Should	Content Owner, Developer, BA
NFR-15	Analytics	Basic analytics may be added only if agreed by stakeholder.	Analytics tool and cookie impact confirmed before enabling.	Could	Product Owner, Business Owner
NFR-16	Maintainability	Website content and page structure should be maintainable by the delivery team or support owner.	Content ownership and update process agreed before release.	Should	Business Owner, Content Owner, Developer
NFR-17	Error handling	Website should show user-friendly messages for form errors or submission issues.	Error messages do not expose technical details and guide the customer clearly.	Must	Developer, QA Tester
NFR-18	Release readiness	Website should pass agreed testing and UAT before go-live.	Release readiness checklist completed and signed off by Product Owner / Business Owner.	Must	Product Owner, Business Owner, QA Tester

5. Testing Approach for NFRs

- QA Tester reviews browser compatibility, form validation, error messages, and basic accessibility.
- Business Analyst supports review by checking requirements coverage against BRD, sitemap, and user stories.
- Product Owner and Business Owner confirm customer-facing content, claims, legal page ownership, and release readiness.
- UAT should include at least desktop and mobile view checks for key user journeys.

6. Assumptions

- The website will not include online payment or checkout in Phase 1.
- Customer enquiries will be sent through email notification in Phase 1.
- The business will confirm the approved email inbox for form notifications.
- Legal and compliance wording will be confirmed by Business Owner or relevant advisor.
- SQL and Power BI reporting will be considered only in Phase 2.

7. Risks and Mitigation

Risk	Impact	Mitigation
Unconfirmed legal or compliance wording	May delay release readiness	Track early and assign confirmation to Business Owner or relevant advisor.
Large or uncompressed images	May slow page loading	Compress images and review page speed during testing.
Missing form validation	May lead to incomplete enquiry data	Define mandatory fields and test form errors before UAT.
Unverified marketing claims	May create customer trust or compliance risk	Business Owner confirms or removes claims before go-live.

8. Traceability Note

This NFR document links back to Sprint 0 outputs, including the Project Intake Note, Discovery Meeting Notes, As-Is Process Flow, To-Be Process Flow, Initial Website Sitemap, Initial Product Backlog, and Business Case Note. It will support later Functional Requirements Document (FRD), test scenario review, User Acceptance Testing (UAT), and release readiness checklist preparation.

9. Approval / Review Note

The Business Analyst prepares and maintains this document. The Product Owner and Business Owner review business priority and acceptance. Developer, UI/UX Designer, and QA Tester review feasibility and testability. Compliance wording is confirmed by the Business Owner or relevant advisor. This document is for BA requirement tracking and is not legal advice.
