

To-Be Process Flow

Field	Details
Project Name	Official Website and Customer Enquiry Management System for a UK Auto Parts SME
Client Name	Auto Parts SME
Document Type	To-Be Process Flow
Prepared By	Business Analyst
Sprint	Sprint 0 Discovery Initiation
Date	14 May 20xx

1. Purpose

The purpose of this document is to show the future customer enquiry process after the official website is introduced. This process flow supports requirement understanding for the website journey, quote request handling, email notification, and business follow-up process.

2. To-Be Process Summary

1. Customer visits the official website and views company information and product categories.
2. Customer selects Request a Quote, Contact Us, or Feedback depending on the need.
3. Website captures customer details in a standard format through the relevant form.
4. Website validates required fields before allowing submission.
5. Customer receives a confirmation message after submission.
6. Business receives an email notification with enquiry details.
7. Sales or enquiry handling team reviews the enquiry, checks product availability or price, and responds to the customer.
8. Follow-up remains manual in Phase 1. SQL and Power BI reporting is planned only as a future Phase 2 enhancement.

3. To-Be Process Flow Diagram

Figure 1: To-Be Customer Enquiry Process Flow

4. Future Process Steps

Step	Role/jts	Activity	Expected Output
1	Customer	Visits official website and views key information.	Customer understands business and available categories.
2	Customer	Browses product/category sections.	Customer identifies relevant auto part category.
3	Customer	Completes Request a Quote or Contact form.	Customer enquiry is captured in standard format.
4	Website/Form	Validates mandatory fields and submits form.	Incomplete enquiries are reduced.
5	Website/Form	Triggers email notification to the business.	Business receives enquiry quickly.
6	Business Team	Reviews enquiry details and checks availability or price.	Quote or response is prepared.
7	Business Team	Responds to the customer and performs manual follow-up.	Customer receives follow-up through agreed channel.

5. Improvements Expected

1. Standard enquiry capture through website forms.
2. Clearer customer journey from category browsing to quote request.
3. Reduced missing information through mandatory fields and validation.
4. Faster business notification through email alerts.
5. Better preparation for future enquiry and lead tracking in Phase 2.

6. Regulation and Compliance Consideration

The future process involves collection of personal data through forms, such as name, phone number, email address, vehicle details and enquiry message. The website should include privacy information, clear form labels, validation messages, cookie information if tracking or analytics is used, newsletter consent where applicable, and customer-facing claims only after business confirmation. This is a Business Analyst compliance note only and not legal advice.

7. SQL and Power BI Involvement

No SQL or Power BI delivery is included in Phase 1. The To-Be process keeps follow-up manual after email notification. Phase 2 may introduce SQL-based enquiry storage and Power BI reporting for lead status, enquiry trends, quote requests, pending follow-ups and conversion rate.

8. BA Notes

1. This To-Be process will support sitemap, user stories, acceptance criteria and form field requirements.
2. The Request a Quote form must be confirmed with the Sales or Enquiry Handling Team before development.
3. Business Owner or relevant advisor must confirm final legal and compliance wording before release.
