PROFILE

Business Analyst with over seven years across manufacturing operations, education technology and digital consultancy. Two formally titled Business Analyst roles sit on top of a six year manufacturing career in which a multi year shop floor digital transformation programme formed a large part of the work, so the analysis background is built on running the processes before redesigning them. Comfortable starting from an unclear problem statement and working through elicitation, As Is and To Be process design, functional documentation, business rules and user acceptance testing to live handover. Writes SQL and builds Power BI reporting directly rather than passing it to a data team, and has recently delivered requirements for reporting platforms integrated with SAP and Salesforce, predictive models with explainability requirements, and prototypes built with AI development tools for early stakeholder validation.

CAREER EXPERIENCE

Ckay Solution Limited, United Kingdom

May 2026 – Aug 2026

Business Analyst (contract)

Business analysis within a small Agile delivery team on client digital products, covering requirements, reporting and data integration across an AI chatbot, a live voice assistant, a BI and SQL backed dashboard for an automotive components manufacturer, and a predictive churn analysis dashboard for an insurance client.

- Architected the reporting and integration requirements linking client dashboards to SAP and Salesforce, mapping source fields, defining calculation rules and validating outputs against the system of record so reported figures came from live systems rather than manual extracts.
- Spearheaded the business analysis for the machine learning work, defining training data, field mappings, API integrations and the explainability rules underwriters needed in order to act on a prediction rather than simply receive one.
- Directed requirements and customer journey work on the enquiry and quotation dashboard, including integration with the client's existing legacy ERP so enquiry and conversion reporting drew on live transactional data.
- Established a reusable set of custom GPTs and Claude Code agents that turn long legacy documents and raw interview notes into structured first drafts, cutting the documentation turnaround at the start of each new workstream.
- Developed working prototypes in Claude Code, Codex and Antigravity IDE, putting reviewable screens in front of stakeholders within the same sprint and closing the gap between workshop and sign off. Backlog, traceability and decisions maintained in Jira and Confluence.

Career Break, MBA Studies and Professional Development, United Kingdom

Jan 2025 – Apr 2026

Full time postgraduate study at Middlesex University alongside professional certification in business analysis, Agile delivery and technology consulting.

FeelTech Digiviation Ltd, India

Dec 2023 – Dec 2024

Business Analyst

Education technology products covering attendance, administration and interactive learning for schools and colleges, working between client stakeholders and the development team through the full delivery cycle.

- Directed the move from paper based attendance to role based web and mobile workflows across six educational institutions, running requirement workshops with teachers and administrators and documenting As Is and To Be processes before build started.
- Designed the attendance reporting and dashboards covering daily and monthly views, absence monitoring and role based access, removing four to six hours of manual compilation each week for teaching and administrative staff.
- Directed user acceptance testing across the web and mobile platforms, writing the test scenarios, running sessions with end users and tracking defects and usability issues to closure before production release.

Jindal Stainless Ltd, India

Nov 2017 – Nov 2023

Associate Manager, Operations

Led business process analysis and operational improvement initiatives supporting large-scale manufacturing automation, production optimisation, vendor collaboration, and performance management. Collaborated with plant leadership, engineering teams, and technology vendors to document business requirements, redesign production processes, validate automation solutions, and monitor operational performance.

- Identified a critical production bottleneck and introduced a consolidated operator control process that generated approximately £0.57M in annual operating cost savings.

- Executed simulation-based validation and pre-production testing, exposing 15 process, usability, and data-tracking issues that were resolved before system deployment, minimising implementation risk.
- Developed KPI reporting and production performance analytics that uncovered process optimisation opportunities delivering approximately £1.1M in annual operating cost savings.
- Received the Star Award (2021) for driving productivity and the Idea Champ Award for advancing manufacturing quality.

India Steel Works Ltd, India

Mar 2016 – Nov 2017

Executive, Operations

Supported manufacturing operations by analysing production performance, monitoring quality metrics, and providing operational insights that informed continuous improvement initiatives. Collaborated with production and quality teams to evaluate operational trends, prepare performance reports, assess process efficiency, and support corrective action activities.

- Produced benchmarking analyses comparing historical and current production metrics, enabling management to prioritise targeted process improvement initiatives.
- Strengthened quality assurance efforts by evaluating out-of-specification events, monitoring process variances, and supporting corrective action tracking to improve manufacturing consistency and compliance.

EDUCATION

Master of Business Administration, Middlesex University, London, United Kingdom (Feb 2026)
B.Tech, Metallurgy and Material Engineering, National Institute of Technology, Srinagar, India (2015)

CERTIFICATIONS

Business Analysis for Project Managers, International Institute of Business Analysis
Professional Certificate in Agile Project Management, Atlassian
Business Analysis A to Z Masterclass, Udemy
Technology Consulting Job Simulation, PwC US (Forage)

TECHNICAL PROFICIENCIES

BA Methods: Requirements elicitation, BRD and FRD, user stories and acceptance criteria, business rules, gap analysis, requirements traceability, As Is and To Be process mapping, BPMN, UAT, Agile and Scrum, stakeholder management
Tools: SQL, Power BI, Jira, Confluence, Lucidchart, Figma, Excel, Python
Systems and Integration: SAP, Salesforce, legacy ERP integration, REST APIs, data validation
AI Tools: Claude Code, ChatGPT, Codex, Antigravity IDE, Power BI Copilot, MCP, custom GPTs
