

To-Be Process Flow

Project Name: ABC School Web and Mobile Application

Prepared by: Shiv Satyam Singh

Purpose

This document shows the future attendance process after ABC School starts using the web and mobile application. It explains how teachers will submit attendance through the mobile application and how Admin Staff will view attendance records and reports through the web application.

Future Attendance Process

1. Teacher opens the mobile application.
2. Teacher enters login credentials.
3. System validates the login credentials.
4. If credentials are invalid, the system shows an invalid login message and the teacher can retry login.
5. If credentials are valid, the teacher dashboard opens.
6. Teacher selects class and date.
7. System displays the active student list for the selected class.
8. Teacher marks each student as Present or Absent.
9. Teacher reviews attendance before submission.
10. Teacher clicks Submit.
11. System checks whether all students are marked.
12. If any student is not marked, the system shows validation message: "Mark all required fields."
13. Teacher updates the missing attendance marks.
14. If all students are marked, the system saves the attendance record.
15. System shows a success message after attendance is saved.
16. Admin opens the web application.

17. Admin enters login credentials.
18. System validates the login credentials.
19. If credentials are invalid, the system shows an invalid login message and Admin can retry login.
20. If credentials are valid, the Admin dashboard opens.
21. Admin views submitted attendance.
22. Admin updates student or teacher data if required.
23. Admin views attendance reports.
24. Reports are available by class, date and student.

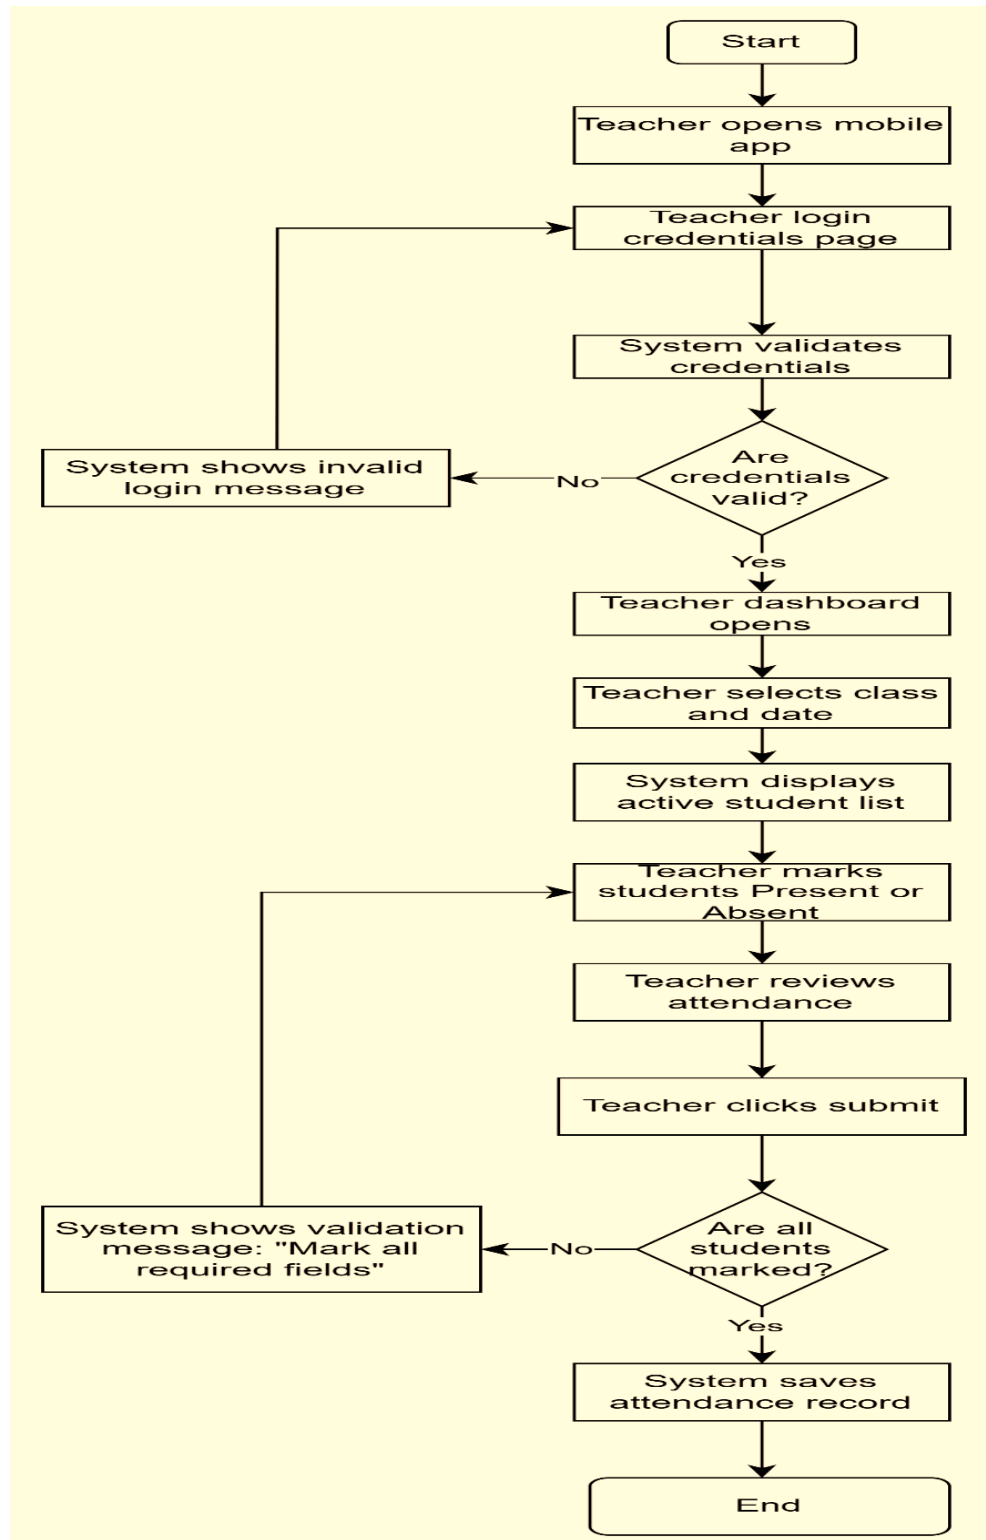

Diagram 1: Teacher Attendance Submission Flow

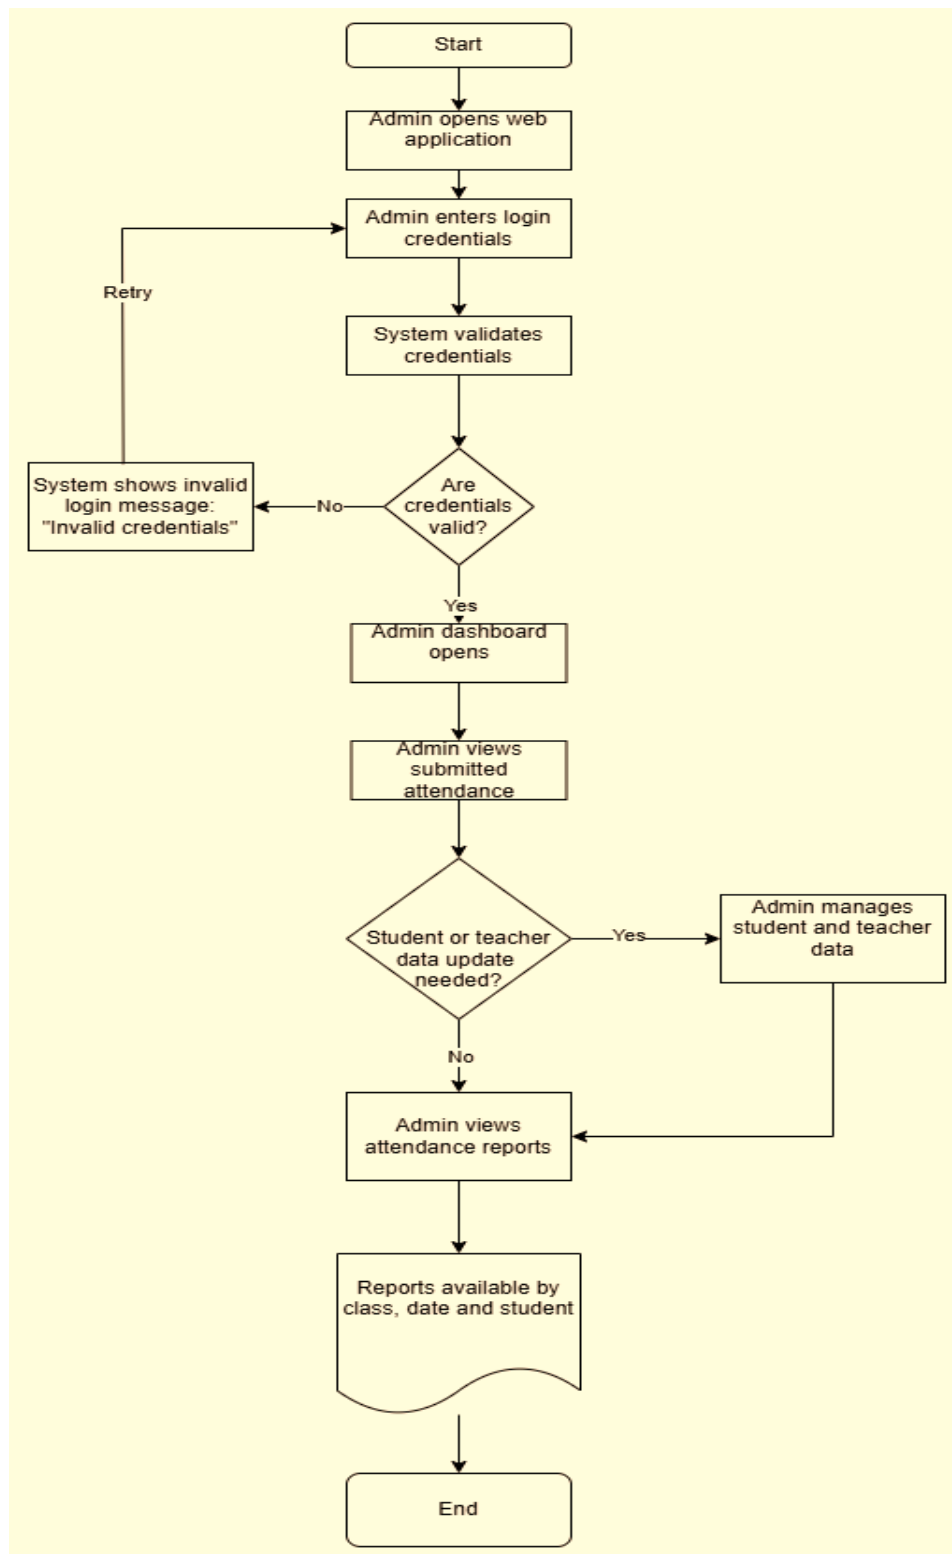

Diagram 2: Admin Attendance Review Flow

Actors Involved

Teacher: Logs into the mobile application, selects class and date, marks student attendance, reviews attendance and submits the final attendance record.

System: Validates login credentials, displays active student list, checks required attendance fields, saves attendance records and shows validation or success messages.

Admin Staff: Logs into the web application, views submitted attendance, manages student and teacher data if required and views attendance reports.

Principal / Product Owner: May review attendance reports and confirm that the digital attendance process meets school requirements.

Business Rules

1. Teacher must log in with valid credentials before accessing the attendance module.
2. Teacher can mark attendance only for assigned classes.
3. Teacher must select class and date before the student list is displayed.
4. All students must be marked as Present or Absent before attendance can be submitted.
5. The system must show a validation message if any required attendance field is missing.
6. Attendance record must be saved only after successful validation.
7. Admin must log in with valid credentials before viewing attendance records.
8. Admin can view attendance reports by class, date and student.
9. Student and teacher data can be updated by Admin Staff if required.
10. Role-based access must separate Teacher and Admin activities.

Exception / Error Scenarios

Invalid Teacher Login: If the teacher enters incorrect login credentials, the system shows an invalid login message and allows the teacher to retry login.

Invalid Admin Login: If Admin enters incorrect login credentials, the system shows an invalid login message and allows Admin to retry login.

Incomplete Attendance: If the teacher clicks Submit without marking all students, the system shows the message “Mark all required fields” and does not save attendance.

No Active Student List: If no active students are available for the selected class, the system should show a suitable message and prevent attendance submission.

Expected Improvements

1. Attendance will be submitted digitally.
2. Manual register dependency will reduce.
3. Admin Staff can view attendance faster.
4. Attendance records will be easier to search and review.
5. Reports can be generated by class, date and student.
6. Teacher and Admin roles will have separate access.
7. Validation rules will reduce incomplete attendance submission.
8. Attendance visibility will improve for school administration.

Business Impact

The To-Be process reduces manual attendance handling and improves the visibility of attendance records. Teachers can submit attendance through the mobile application, while Admin Staff can view attendance and reports through the web application. This helps ABC School reduce manual effort, improve record accuracy and prepare attendance reports faster.
