

Phase 2 Approval Note

Official Website and Customer Enquiry Management System for a UK Auto Parts SME

Client Display Name	Auto Parts SME
Project Area	Phase 2: Customer Enquiry and Sales Lead Tracking Dashboard
Document Owner	Business Analyst
Working Date	June 20XX
Working Time	09:30 AM to 10:30 AM
Status	Approved for implementation planning
Version	v1.0

1. Approval Summary

After Sprint 4 review and closure, the business has approved Phase 2 to move from future enhancement planning into implementation planning. This approval is for a small reporting enhancement to support customer enquiry and sales lead tracking using SQL and Power BI.

This approval does not change the Phase 1 website MVP. Phase 1 remains closed. Phase 2 will be tracked as a separate approved delivery stream.

2. Approval Decision

Decision Item	Decision
Phase 2 status	Approved to proceed into implementation planning
Implementation approach	Sprint 5 and Sprint 6 delivery recommended
Production SQL database	Not built yet. To be planned in Sprint 5.
Production Power BI dashboard	Not built yet. To be planned in Sprint 6.
Business approval basis	Sprint 4 SQL and Power BI requirement outputs reviewed
Compliance condition	Data privacy, access, retention, and dashboard export rules to be confirmed before production use

3. Documents Reviewed Before Approval

- Sprint 4 Start and Planning Notes
- Phase 2 SQL Data Requirement Document
- Phase 2 Logical Data Relationship Diagram
- Phase 2 Power BI Dashboard Requirement Document
- Power BI Dashboard Wireframe
- SQL Validation Plan
- SQL Query Log
- Sprint 4 Review Notes
- Sprint 4 Retrospective Notes
- Sprint 4 Closure Summary

4. Approved Phase 2 Scope

The approved Phase 2 delivery scope is limited to enquiry and sales lead tracking for the Auto Parts SME website. The scope remains realistic for a small company.

- Create SQL data structure for enquiries, quote requests, product categories, lead status, enquiry source, follow-up notes, and newsletter subscription.
- Prepare sample or migrated enquiry data for reporting validation.
- Create SQL views or reporting-ready datasets for Power BI.

- Build Power BI dashboard using approved KPIs, filters, and visual layout.
- Validate SQL source data against Power BI dashboard numbers.
- Support dashboard UAT and business sign-off.

5. Out of Scope for Approved Phase 2

- No customer login or customer dashboard.
- No online payment or checkout.
- No live inventory integration.
- No mobile app.
- No complex admin portal.
- No external API integration unless separately approved.
- No public sharing of customer personal data.

6. What the Business Analyst Does Now

- Create Sprint 5 planning notes for SQL data build.
- Convert approved requirements into delivery user stories and acceptance criteria.
- Clarify data fields, lead status rules, follow-up rules, and reporting definitions.
- Support Data Developer and Power BI Developer during build clarification.
- Review SQL validation outputs and dashboard wireframe alignment.
- Prepare UAT plan, evidence log, sign-off, release readiness, and closure for Phase 2 delivery.

7. What Other Team Members Do Now

Role	Activity after approval
Business Owner	Approves Phase 2 value, confirms reporting priorities, and confirms data usage expectations.
Product Owner	Creates delivery priority, confirms backlog order, and accepts Sprint 5 and Sprint 6 outcomes.
Scrum Master	Sets up Sprint 5 and Sprint 6, facilitates ceremonies, and tracks delivery progress.
Data Developer	Plans SQL tables, relationships, sample data, validation queries, and reporting views.
Power BI Developer	Plans dashboard data connection, KPI cards, visuals, filters, and report layout.
QA Tester	Prepares SQL validation testing, dashboard reconciliation testing, and UAT support approach.
Business Analyst	Keeps requirements clear, manages clarifications, supports backlog, reviews output, and supports UAT.

8. Recommended Implementation Plan

Sprint	Purpose	Main output
Sprint 5	SQL Data Build	SQL tables, sample data, relationships, validation checks, and reporting views.
Sprint 6	Power BI Dashboard Build and UAT	Power BI dashboard, data reconciliation, dashboard UAT, sign-off, and closure.

9. Compliance and Data Governance Notes

From a BA perspective, the following points must be confirmed before production use of SQL and Power BI reporting:

- Who can access customer name, email, phone number, and enquiry message.
- Whether email or phone should be masked in the Power BI dashboard.
- How newsletter consent and unsubscribe status will be handled.

- How long enquiry and lead data will be retained.
- Whether dashboard export or sharing should be restricted.
- Whether customer data can be used for monthly trend and source reporting.

This is BA-level compliance tracking only. Final confirmation should come from the Business Owner or relevant advisor.

10. Jira and Confluence Actions

Jira: You need to update this manually. Create a task called “Prepare Phase 2 Approval Note” under the Future Reporting Enhancement epic and mark it Done after uploading the document.

Confluence: You need to update this manually. Create page title “Phase 2 Approval Note” under Phase 2 Approved Delivery and attach the Word/PDF files.

11. Approval Record

Role	Decision / Input	Status
Business Owner	Approved Phase 2 for implementation planning	Approved
Product Owner	Confirmed delivery priority for Sprint 5 and Sprint 6 planning	Approved
Scrum Master	Confirmed new delivery sprint setup required	Accepted
Business Analyst	Confirmed requirements baseline and next BA actions	Completed
Data Developer	Confirmed SQL delivery planning can start	Ready for planning
Power BI Developer	Confirmed dashboard build planning can start	Ready for planning
QA Tester	Confirmed future validation and UAT planning required	Ready for planning

12. Interview Explanation

After Sprint 4 planning outputs were reviewed, the business approved Phase 2 to move into implementation planning. I prepared the Phase 2 Approval Note to capture the approval decision, scope, out-of-scope items, team responsibilities, compliance follow-ups, and recommended Sprint 5 and Sprint 6 delivery approach. This helped move the work from analysis into planned delivery without mixing it with the already closed Phase 1 website MVP.

Sprint 5 Planning Notes

Official Website and Customer Enquiry Management System for a UK Auto Parts SME

1. Document Control

Field	Details
Client display name	Auto Parts SME
Phase	Phase 2: SQL and Power BI Reporting Enhancement
Sprint	Sprint 5: SQL Data Build
Sprint duration	June 20XX
Prepared by	Business Analyst
Document date	June 20XX
Version	1.0
Status	Completed as Sprint 5 planning evidence

2. Purpose of This Document

This document records the start of Sprint 5 after Phase 2 approval. It confirms the sprint goal, planned backlog, ownership, story points, expected outputs, and Jira and Confluence updates needed for the SQL data build work.

This planning note is created during Sprint 5 planning. It is not a separate project document required before the sprint starts. In a real Agile team, the backlog is prepared before the sprint, and this planning note is completed at the start of the sprint.

3. Sprint Summary

Item	Details
Sprint name	Sprint 5: SQL Data Build
Sprint status	Active
Duration	June 20XX
Total backlog items	12
Total planned story points	30
Sprint goal	Build the SQL data foundation for customer enquiry and lead tracking dashboard.
Main output	SQL tables, sample data, SQL reporting views, validation evidence, and Power BI readiness review.

4. Sprint 5 Scope

- Create the SQL data structure for customer enquiry, quote request, lead status, follow-up note, enquiry source, product category, and newsletter subscription data.
- Prepare sample enquiry and quote request data for testing and reporting validation.
- Create SQL views or reporting-ready outputs that can support the Sprint 6 Power BI dashboard.
- Review SQL build against approved Phase 2 data requirements.
- Run SQL validation checks before dashboard work starts.
- Confirm that SQL output is ready for Power BI dashboard development in Sprint 6.

5. Out of Scope for Sprint 5

- Final Power BI dashboard build is not included in Sprint 5.
- Customer login, payment, checkout, live inventory, and external API integration are not included.
- No real customer data will be used in portfolio evidence.
- Final Phase 2 business sign-off will happen after Sprint 6 dashboard UAT.

6. Next 2 Hours Work by Role

Team member	Next 2 hours job	Why this is needed
Scrum Master	Confirm sprint goal, scope, delivery plan, and blockers.	To start the sprint with clear direction and reduce delivery confusion.
Product Owner	Confirm priority of SQL build items.	To make sure the team works on the highest-value data foundation first.
Business Analyst	Complete Sprint 5 planning notes and confirm user stories are ready.	To provide clear delivery evidence and avoid unclear requirements.
Business Owner	Confirm reporting value for enquiry and lead tracking.	To ensure the SQL build supports business decision making.
Data Developer	Review required tables, fields, and relationships.	To prepare SQL structure before writing scripts.
QA Tester	Review SQL validation needs and expected test checks.	To prepare testing before data build is completed.
Power BI Developer	Review required SQL output for dashboard KPIs.	To ensure Sprint 6 dashboard can connect to correct reporting fields.
DevOps	Confirm where SQL scripts and project files will be stored.	To support version control and controlled handover.

7. Sprint 5 Backlog and Story Points

No.	Type	Backlog item	Owner	SP	Status
1	Task	Prepare Sprint 5 Planning Notes	Business Analyst	2	In Progress at start, Done after this document is attached
2	Task	Prepare SQL Build User Stories and Acceptance Criteria	Business Analyst	2	To Do
3	Task	Create ERD / Data Relationship Diagram	Data Developer	3	To Do
4	Story	Create SQL Tables for Enquiry and Lead Tracking	Data Developer	5	To Do
5	Story	Add Sample Enquiry and Quote Request Data	Data Developer	3	To Do
6	Story	Create SQL Views for Power BI Reporting	Data Developer	5	To Do
7	Task	Review SQL Build Against Data Requirements	Business Analyst	3	To Do
8	Task	Run SQL Validation Checks	QA Tester	3	To Do
9	Task	Review SQL Output for Power BI Readiness	Power BI Developer	2	To Do
10	Task	Prepare Sprint 5 Review Notes	Business Analyst / Scrum Master	1	To Do
11	Task	Prepare Sprint 5 Retrospective Notes	Scrum Master / Team	1	To Do
12	Task	Prepare Sprint 5 Closure Summary	Business Analyst / Scrum Master	2	To Do

8. Key Dependencies

Dependency	Impact if not ready	Owner
Approved Phase 2 SQL Data Requirement Document	SQL build may not match reporting needs.	Business Analyst
Confirmed field list and data rules	Developer may build incomplete tables or incorrect relationships.	Business Analyst / Data Developer
ERD or logical data relationship view	SQL tables may be built without clear relationships.	Data Developer
Sample data rules	QA and Power BI review may not be realistic.	Business Analyst / QA
Power BI KPI requirements	SQL views may miss required dashboard fields.	Power BI Developer

9. Risks and Controls

Risk	Control action	Owner
SQL tables do not support dashboard KPIs.	Power BI Developer reviews required output before SQL views are finalised.	Power BI Developer
Data fields are unclear.	Business Analyst confirms field definitions and rules before SQL build starts.	Business Analyst
Validation is left too late.	QA Tester reviews SQL validation plan during sprint start.	QA Tester
Portfolio evidence includes sensitive details.	Use only anonymised project name and sample data.	Business Analyst
ERD and SQL scripts do not match.	Data Developer reviews ERD before table build and BA checks against requirement document.	Data Developer / BA

10. Jira Update Required

Jira item	Update
Sprint 5: SQL Data Build	Status is Active. Duration is June 20XX.
Prepare Sprint 5 Planning Notes	Move from In Progress to Done after attaching this document.
Prepare SQL Build User Stories and Acceptance Criteria	Keep in To Do. This is the next task.
Remaining Sprint 5 items	Keep in To Do until their work starts.

11. Confluence Update Required

Update Confluence page: Phase 2 - Sprint 5 SQL Data Build.

- Add sprint name, duration, sprint goal, total backlog items, and total story points.
- Add or attach this Sprint 5 Planning Notes document.
- Add the Jira sprint link or mention the Jira sprint name.
- Record that Sprint 5 is active and the first planning task is completed.

12. Interview Explanation

In Sprint 5, I supported sprint planning after Phase 2 approval by confirming the sprint goal, backlog items, story points, owners, risks, dependencies, and planned outputs. The sprint focused on SQL data build so that enquiry and lead tracking data could be validated before Power BI dashboard development started in Sprint 6.

Sprint 6 Planning Notes

Official Website and Customer Enquiry Management System for a UK Auto Parts SME

1. Document Control

Field	Details
Project display name	Official Website and Customer Enquiry Management System for a UK Auto Parts SME
Phase	Phase 2 - SQL and Power BI Reporting
Sprint	Sprint 6: Power BI Dashboard Build
Document name	Sprint 6 Planning Notes
Prepared by	Business Analyst / Scrum Master
Date	June 20XX
Status	Draft for sprint start
Confidentiality	Anonymised portfolio evidence. No real client identifiers included.

2. Sprint Context

Sprint 6 starts after successful closure of Sprint 5 SQL Data Build. The SQL Server Express connection, reporting views, validation checks, and Power BI readiness review were completed in Sprint 5. Sprint 6 will use those validated SQL reporting views to build and test the Power BI dashboard.

Item	Details
Sprint name	Sprint 6: Power BI Dashboard Build
Duration	June 20XX
Sprint length	2 weeks
Total backlog items	13
Total planned story points	34
Sprint status	Active
Sprint goal	Build and validate a Power BI dashboard using approved SQL reporting views.

3. Sprint Goal

The goal of Sprint 6 is to create a working Power BI dashboard that supports enquiry volume tracking, quote request monitoring, lead status analysis, product category reporting, enquiry source analysis, follow-up visibility, and newsletter subscription reporting.

4. Sprint 6 Backlog

No.	Backlog item	Type	Owner	SP
1	Prepare Sprint 6 Planning Notes	Task	BA / Scrum Master	2
2	Review Power BI Dashboard Requirements	Task	BA	2
3	Connect Power BI to SQL Reporting Views	Story	Power BI Developer	3
4	Create Power BI Data Model Relationships	Story	Power BI Developer	3
5	Create DAX Measures for KPIs	Story	Power BI Developer	5
6	Build Dashboard Visuals and Filters	Story	Power BI Developer	5
7	Validate Dashboard Numbers Against SQL	Task	QA	3
8	Review Dashboard Against Business Requirements	Task	BA	3
9	Prepare Dashboard UAT Plan	Task	BA	2
10	Capture Dashboard UAT Evidence	Task	BA / QA	2
11	Prepare Sprint 6 Review Notes	Task	BA / Scrum Master	1
12	Prepare Sprint 6 Retrospective Notes	Task	Scrum Master / Team	1
13	Prepare Phase 2 Closure Summary	Task	BA / Scrum Master	2

5. Roles and Responsibilities

Role	Sprint 6 responsibility
Scrum Master	Facilitate sprint start, track progress, support blocker removal, and close sprint ceremonies.
Business Analyst	Review dashboard requirements, confirm KPIs, prepare UAT plan, capture UAT evidence, and review dashboard against business needs.
Product Owner	Confirm dashboard priority and support acceptance of Sprint 6 outputs.
Power BI Developer	Connect Power BI to SQL views, build model relationships, create DAX measures, and design dashboard visuals.
QA Tester	Validate dashboard numbers against SQL outputs and confirm reporting accuracy.
Data Developer	Support SQL view clarification if any reporting field or join issue is found.

6. Expected Sprint Outputs

- Power BI connection to SQL Server Express reporting views.
- Power BI data model with correct table relationships.
- DAX measures for key business KPIs.
- Dashboard visuals and filters for enquiry, quote, lead, source, product category, follow-up, and newsletter reporting.
- Dashboard validation evidence against SQL outputs.
- Dashboard UAT plan and UAT evidence.
- Sprint 6 review, retrospective, and Phase 2 closure documentation.

7. Key Dependencies

Dependency	Status	Impact
Sprint 5 SQL tables completed	Done	Power BI can use approved database structure.
SQL reporting views created	Done	Dashboard can connect to clean reporting outputs.
SQL validation completed	Done	Dashboard testing can compare against trusted SQL results.
Power BI readiness testing completed	Done	Sprint 6 can proceed without major data source risk.
Dashboard requirements available	Done	BA can review visuals against approved business need.

8. Risks and Mitigation

Risk	Mitigation
Dashboard numbers may not match SQL view output	QA will validate dashboard KPIs against SQL results before UAT.
Power BI relationships may create duplicate counts	Power BI Developer will review relationships and DAX calculations carefully.
Dashboard may not fully answer business questions	BA will review visuals against approved dashboard requirements.
UAT feedback may require minor layout changes	Feedback will be captured and handled before Phase 2 closure.

9. Definition of Done

- All Sprint 6 backlog items are completed in Jira.
- Power BI dashboard is built using validated SQL reporting views.
- Dashboard KPIs and visuals are checked against SQL outputs.
- Dashboard is reviewed against business requirements.
- UAT evidence is captured and documented.
- Sprint 6 review and retrospective are completed.

- Phase 2 closure summary confirms SQL and Power BI reporting delivery.

10. Jira and Confluence Update

Tool	Update required
Jira	Sprint 6: Power BI Dashboard Build started. First task moved from To Do to In Progress.
Confluence	Create or update Phase 2 - Sprint 6 Power BI Dashboard Build page with sprint goal, dates, backlog count, story points, and planning notes.

11. BA Interview Explanation

In Sprint 6, I supported planning for the Power BI Dashboard Build by confirming the sprint goal, backlog, story points, roles, dependencies, risks, expected outputs, and Definition of Done. This ensured that the dashboard work was traceable to the SQL data foundation completed in Sprint 5 and aligned with the approved business reporting requirements.

Phase 2 SQL Data Requirement Document

Official Website and Customer Enquiry Management System for a UK Auto Parts SME

Field	Details
Client Name	Auto Parts SME
Document Owner	Business Analyst
Working Date	June 20XX
Sprint	Sprint 4 - Future SQL and Power BI Enhancement
Version	v1.0
Confidentiality Note	Anonymised portfolio sample. No real client name, URL, logo, address, phone number, email, or identifiable detail is used.

1. Purpose

This document defines the Phase 2 Structured Query Language (SQL) data requirements for the future Customer Enquiry and Sales Lead Tracking Dashboard. The purpose is to identify what enquiry data should be captured, stored, validated, and made ready for Power BI reporting in a later enhancement phase.

This is a BA requirement document, not a final database build document. The final physical database design should be confirmed by the technical team.

2. Phase 2 Scope

Phase 2 is focused on creating a simple enquiry and sales lead data structure so the business can track customer enquiries, quote requests, product category interest, lead status, follow-up notes, and enquiry source.

- Capture customer enquiry records from Request a Quote, Contact Us, Feedback, and Newsletter forms.
- Store product category selected by customers during quote enquiry.
- Track lead status such as New, Contacted, Quoted, Converted, Lost, or Closed.
- Record follow-up notes and next follow-up date.
- Prepare data fields required for Power BI dashboard measures and filters.
- Support data validation for missing contact details, duplicate leads, lead status accuracy, and dashboard number checks.

3. Out of Scope

- No online payment, checkout, customer login, live inventory, or customer dashboard.
- No real-time integration with supplier systems or third-party applications.
- No production database build in this document.
- No Power BI dashboard design in this document. Power BI requirements will be documented separately.
- No personal client identifiable details are included.

4. Data Sources

Source	Purpose	Key Data Captured	Phase 2 Use
Request a Quote Form	Customer asks for part quotation	Name, email, phone, category, vehicle details, message, consent	Main sales lead source
Contact Us Form	General customer message	Name, email, phone, message, consent	General enquiry tracking
Feedback Form	Customer sends feedback	Feedback type, rating, message, optional name/email	Service improvement insight
Newsletter Form	Customer subscribes to updates	Email, consent, subscription date	Marketing consent record

5. Proposed Data Entities

Entity	Description	Main Identifier	Created From	Business Owner
Customer	Stores customer contact information used for enquiry follow-up.	Customer_ID	Quote, Contact, Feedback forms	Business Owner
Enquiry	Stores each customer enquiry received through website forms.	Enquiry_ID	Quote, Contact, Feedback forms	Sales/Customer Service
Quote Request	Stores specific quote details where customer requests auto part pricing/availability follow-up.	Quote_Request_ID	Request a Quote form	Sales Team
Product Category	Stores agreed auto parts categories used for enquiry classification.	Category_ID	Product category list	Business Owner
Lead Status	Stores current status of each enquiry or quote request.	Lead_Status_ID	Sales follow-up process	Sales Team
Follow-up Note	Stores follow-up comments, next action, and follow-up date.	Follow_Up_ID	Manual sales update	Sales Team
Enquiry Source	Stores the source/channel from where enquiry came.	Source_ID	Website forms/referral/phone/email	Business Owner
Newsletter Subscription	Stores subscription consent and unsubscribe status.	Subscription_ID	Newsletter form	Marketing/Business Owner

6. Data Field Requirements

The table below defines the key SQL data fields required from a BA perspective. Final data types and indexing should be confirmed by the database developer.

Entity	Field Name	Business Meaning	Suggested Type	Required?	Rule/Note
Customer	Customer_ID	Unique customer identifier	Integer/UUID	Yes	System generated
Customer	Full_Name	Customer full name	Text	Yes for quote/contact	Captured from form
Customer	Email_Address	Customer email address	Text	Yes for quote/contact/newsletter	Must follow email format
Customer	Phone_Number	Customer phone number	Text	No	Optional but useful for follow-up
Enquiry	Enquiry_ID	Unique enquiry identifier	Integer/UUID	Yes	System generated
Enquiry	Enquiry_Type	Quote, Contact, Feedback, Newsletter	Text/Lookup	Yes	Used for dashboard filtering
Enquiry	Enquiry_Date	Date enquiry received	Date/Time	Yes	Used for monthly trend
Enquiry	Message_Text	Customer message/details	Text	Conditional	Required for quote/contact/feedback
Quote Request	Quote_Request_ID	Unique quote request identifier	Integer/UUID	Yes	System generated
Quote Request	Product_Category_ID	Selected auto parts category	Integer/Lookup	Yes	Links to product category
Quote Request	Vehicle_Make	Vehicle make	Text	No	Optional field
Quote Request	Vehicle_Model	Vehicle model	Text	No	Optional field
Quote Request	Vehicle_Year	Vehicle year	Number/Text	No	Optional field
Quote Request	Part_Details	Customer part requirement	Text	Yes	Required for quote
Lead Status	Lead_Status	New, Contacted, Quoted, Converted, Lost, Closed	Lookup	Yes	Default New
Follow-up Note	Follow_Up_Note	Sales follow-up note	Text	No	Added manually
Follow-up Note	Next_Follow_Up_Date	Next follow-up date	Date	No	Used for pending follow-up report
Enquiry Source	Source_Name	Website, phone, email, referral, social media	Lookup	Yes	Default Website for website forms
Newsletter	Consent_Given	Newsletter consent flag	Boolean	Yes	Must be true for subscription
Newsletter	Unsubscribe_Status	Subscribed or unsubscribed	Boolean/Text	Yes	Used for marketing consent control

7. Basic Entity Relationship Requirement

At BA level, the system should allow enquiry records to connect customer details, quote request details, product category, lead status, source, and follow-up notes.

- One Customer can have many Enquiries.
- One Enquiry can be linked to one Quote Request when the enquiry type is quote.
- One Quote Request must be linked to one Product Category.
- One Enquiry should have one current Lead Status.
- One Enquiry can have many Follow-up Notes.
- One Enquiry should have one Enquiry Source.
- One Customer can have zero or one active Newsletter Subscription record.

Shiv, you have to make this diagram in Draw.io or Visio. I will help you. This should be a simple logical data relationship diagram, not a complex developer-level database diagram.

8. Data Validation Requirements

Validation Area	Requirement	Example Check	Owner
Missing contact details	Identify enquiries missing email and phone.	Email_Address is blank and Phone_Number is blank	BA/QA/Data Analyst
Duplicate leads	Identify possible duplicate customers or repeated enquiries.	Same email and same category within short period	BA/Data Analyst
Lead status accuracy	Lead status must use approved values only.	Not in New, Contacted, Quoted, Converted, Lost, Closed	Sales Team/BA
Dashboard number validation	Dashboard totals must match source enquiry table.	Total enquiries in Power BI equals SQL count	BA/Data Analyst
Consent validation	Newsletter records require positive consent.	Consent_Given is true before subscription active	Business Owner/BA
Category validation	Quote requests must have valid product category.	Category_ID exists in Product Category table	BA/QA

9. Business Rules for SQL Data

- Every enquiry record must have a unique Enquiry_ID.
- Every quote request must have customer contact details and product category.
- Default lead status for a new enquiry should be New.
- Lead status should be updated manually by the sales or business team during follow-up.
- Newsletter subscription must not be active unless consent is captured.
- Product category values should match the agreed website categories: Body Parts, Lighting, Engines, Differential, Electrical, Gearbox, Other.
- Feedback records should not be shown publicly unless separately approved by the business.
- Personal data use and retention should be confirmed by the business owner or relevant advisor.

10. Reporting Readiness for Power BI

These SQL requirements support future Power BI dashboard measures. The Power BI dashboard requirement document will define visuals separately, but the SQL data should support the following reporting needs:

- Total enquiries received.
- Total quote requests received.
- Top product categories by enquiry count.
- Pending follow-ups.
- Lead conversion rate.
- Monthly enquiry trend.
- Enquiry source breakdown.

- Lead status summary.

11. Assumptions and Open Questions

ID	Assumption / Question	Owner
A1	Phase 2 will use sample or anonymised data for portfolio demonstration.	Business Analyst
A2	Final database platform and hosting decision will be made by technical owner.	Technical Owner
A3	Data retention and privacy handling will be confirmed by business/compliance owner.	Business Owner
Q1	Will the business manually update lead status, or will a simple internal form be added later?	Business Owner
Q2	Should duplicate lead matching use email only, phone only, or both?	Product Owner
Q3	Which enquiry sources should be mandatory for dashboard filtering?	Product Owner

12. BA Summary

The Business Analyst has defined the initial SQL data requirements for Phase 2 so that the future reporting enhancement has a clear data foundation. This document connects website enquiry forms with future lead tracking and reporting needs, without adding Phase 2 features into the Phase 1 website MVP.

13. Jira and Confluence Guidance

Jira action: Create one Task under the Sprint 4 Future Reporting Enhancement epic with summary: Prepare Phase 2 SQL Data Requirement Document. Status can be Done after review.

Confluence action: Create page title Phase 2 SQL Data Requirement Document under Sprint 4 Future Enhancement and attach this Word/PDF file. You need to update this manually.

14. Portfolio and Interview Use

Portfolio evidence: Save this document under Sprint 4 future enhancement evidence. Anonymise all client details and use only Auto Parts SME as the display client name.

Interview explanation: I prepared a Phase 2 SQL Data Requirement Document to define enquiry, quote request, product category, lead status, follow-up, and enquiry source data requirements. This helped the team understand what data would be needed later for lead tracking and Power BI reporting.

Phase 2 Power BI Dashboard Requirement Document

Official Website and Customer Enquiry Management System for a UK Auto Parts SME

Phase 2 Future Enhancement: Customer Enquiry and Sales Lead Tracking Dashboard

Document Control	Details
Client Display Name	Auto Parts SME
Project Name	Official Website and Customer Enquiry Management System for a UK Auto Parts SME
Phase	Phase 2 - Future SQL and Power BI Reporting Enhancement
Sprint	Sprint 4 Future SQL and Power BI Enhancement
Working Date	June 20XX
Prepared By	Business Analyst
Status	Draft for business and reporting review
Confidentiality	Anonymised portfolio version. No real client name, URL, logo, address, phone, or email is included.

1. Purpose

This document defines the business requirements for a future Power BI (Business Intelligence) dashboard for the Auto Parts SME enquiry and sales lead tracking process. The dashboard will help the business monitor customer enquiries, quote requests, product category demand, follow-up status, conversion performance, and monthly enquiry trends.

This document is a BA requirement document only. It does not confirm that a production Power BI dashboard has already been built.

2. Background

Phase 1 delivered the website MVP where customers can view company information, browse product categories, submit quote requests, contact the business, provide feedback, and subscribe to updates. Phase 2 is planned as a future reporting enhancement so the business can analyse the enquiries received from the website.

The SQL Data Requirement Document prepared earlier defines the data foundation. This Power BI requirement document defines how that data should be visualised and used by the business.

3. Dashboard Scope

In Scope	Out of Scope
Total enquiries and quote requests reporting	Online payment reporting
Product category demand reporting	Live stock or inventory reporting
Lead status and follow-up tracking	Customer login analytics
Enquiry source analysis	Full sales order management
Monthly enquiry trend	Complex finance or accounting dashboard
Conversion rate view from enquiry to converted lead	Automated CRM integration in this phase

4. Intended Dashboard Users

User Role	Dashboard Need
Business Owner	View overall enquiry performance, customer demand, and pending follow-ups.
Sales / Enquiry Handler	Track quote requests, follow-up due items, and lead status.
Operations Manager	Review category demand and enquiry trends for business planning.
Business Analyst	Validate that dashboard measures match business requirements and

User Role	Dashboard Need
	source data rules.

5. Key Performance Indicators (KPIs)

KPI	Business Meaning	Expected Calculation / Rule
Total Enquiries	Total number of customer enquiries received through website forms.	Count of enquiry records in selected period.
Total Quote Requests	Number of enquiries submitted through Request a Quote form.	Count where enquiry type equals quote request.
Top Product Categories	Most requested auto parts categories.	Count of quote requests grouped by product category.
Pending Follow-ups	Leads that still need business follow-up.	Count where lead status is pending or follow-up due.
Converted Leads	Enquiries that resulted in successful sales lead conversion.	Count where lead status equals converted.
Conversion Rate	Percentage of quote requests converted to leads or sales opportunity.	Converted leads divided by total quote requests, shown as percentage.
Monthly Enquiry Trend	Change in enquiry volume month by month.	Count of enquiries grouped by month.
Enquiry Source Breakdown	Where enquiries are coming from.	Count by source such as website, contact form, quote form, newsletter, referral, or other.

6. Suggested Dashboard Pages

Dashboard Page	Purpose	Main Visuals
Executive Summary	Give quick overview of enquiry and lead performance.	KPI cards, monthly trend, top categories, lead status summary.
Enquiry Analysis	Analyse enquiry volume by date, source, and form type.	Line chart, source breakdown, enquiry type table.
Quote Request Analysis	Review quote request demand and product categories.	Bar chart by category, quote request table, category trend.
Lead Follow-up Tracker	Track pending follow-ups and lead status.	Status cards, follow-up due table, pending follow-up count.
Newsletter and Feedback View	Review newsletter subscriptions and feedback counts.	Subscription count, feedback rating summary, feedback type count.

7. Required Filters and Slicers

- Date range
- Month / year
- Product category
- Lead status
- Enquiry source
- Form type
- Preferred contact method
- Follow-up status

8. Data Source Requirements

Data Area	Source Requirement	Used For
Customer	Customer name, email, phone, consent status.	Customer enquiry and follow-up reporting.
Enquiry	Enquiry date, enquiry type, message, source, status.	Total enquiries and trend reporting.

Data Area	Source Requirement	Used For
Quote Request	Product category, vehicle details, requested part details.	Quote demand and top category reporting.
Lead Status	New, pending, contacted, quoted, converted, closed, lost.	Lead pipeline and conversion reporting.
Follow-up Note	Follow-up date, note, owner, next action, due date.	Pending follow-up and activity tracking.
Newsletter Subscription	Email, consent date, subscription status, unsubscribe status.	Newsletter subscription reporting and consent tracking.

9. Visual Requirement Summary

Visual Type	Requirement
KPI Cards	Show total enquiries, quote requests, pending follow-ups, converted leads, and conversion rate.
Line Chart	Show monthly enquiry trend.
Bar Chart	Show top product categories by enquiry count.
Donut / Pie Chart	Show enquiry source or lead status distribution. Use only where it remains readable.
Table / Matrix	Show detailed lead follow-up list with status, due date, and owner.
Filter Panel	Allow users to filter by date, category, source, and status.

10. Business Rules for Reporting

Rule ID	Business Rule
PBR-01	Only valid submitted enquiries should be counted in total enquiry metrics.
PBR-02	Duplicate enquiries should be reviewed before dashboard numbers are finalised.
PBR-03	Conversion rate should be based on agreed converted status only.
PBR-04	Pending follow-up should include records where follow-up is due or lead status is pending.
PBR-05	Newsletter data should be used only where consent is captured.
PBR-06	Dashboard should avoid showing unnecessary personal data unless required by authorised users.

11. Data Quality and Validation Requirements

Validation Area	Requirement
Missing Contact Details	Identify enquiries with missing email and missing phone number.
Duplicate Leads	Flag possible duplicate enquiries based on email, phone, and similar message/date.
Lead Status Accuracy	Validate that each enquiry has a clear current lead status.
Dashboard Numbers	Compare dashboard totals with SQL source counts before sign-off.
Date Accuracy	Check enquiry date and follow-up date are populated correctly.
Consent Data	Validate consent capture for newsletter and enquiry follow-up use.

12. Access and Compliance Considerations

From BA perspective, the following items should be confirmed with the Business Owner or relevant advisor before any real dashboard is published:

- Who can access customer personal data in the dashboard.
- Whether customer email and phone number should be masked for some users.
- How long enquiry and lead data should be retained.

- How newsletter consent and unsubscribe status should be handled.
- Whether dashboard sharing/exporting should be restricted.
- Whether dashboard data is used only for legitimate business follow-up and reporting purposes.

13. Acceptance Criteria

AC ID	Acceptance Criteria
AC-01	Dashboard requirements include agreed KPIs for enquiry and quote tracking.
AC-02	Dashboard pages, filters, visuals, and data sources are defined.
AC-03	Conversion rate, pending follow-up, and top category logic are documented.
AC-04	Data quality and SQL validation needs are captured.
AC-05	Compliance and access considerations are recorded from BA perspective.
AC-06	Dashboard requirement remains clearly marked as future enhancement, not Phase 1 delivery.

14. Open Questions

Question	Owner / Action
What exact lead statuses should be used by the business?	Business Owner / Product Owner to confirm.
Should conversion mean sale completed, quote accepted, or lead qualified?	Business Owner to confirm business definition.
Who will own dashboard refresh and data maintenance?	Business Owner and technical team to confirm.
Should personal data be visible in Power BI or masked in summary views?	Business Owner / compliance advisor to confirm.
What refresh frequency is needed: daily, weekly, or manual?	Business Owner to confirm.

15. BA Summary

The Phase 2 Power BI Dashboard Requirement Document defines the future reporting need for enquiry and lead tracking. It connects Phase 1 website enquiry data with future business reporting goals. This document will support dashboard wireframing, SQL validation planning, and stakeholder review before any production dashboard build.

Portfolio Note: Phase 2 is documented as a future enhancement. This requirement document shows BA analysis and reporting planning, not a completed production dashboard.

Stage 56: SQL Build User Stories and Acceptance Criteria

Official Website and Customer Enquiry Management System for a UK Auto Parts SME

Client name used for portfolio: Auto Parts SME

Document type: BA Professional Document

Prepared by: Business Analyst

1. Stage Summary

Item	Details
Sprint name	Sprint 5 SQL Data Build
Sprint duration	June 20XX
Sprint working days	5 working days
Sprint working hours	09:00 AM to 05:00 PM
Stage date	June 20XX
Stage time	01:00 PM to 04:30 PM
Real time taken	3.5 hours
Simulation time	Sprint 5, Day 1
Stage purpose	Prepare SQL build user stories and acceptance criteria after Phase 2 approval.

2. What Is Happening in the Project

Phase 2 has been approved after Sprint 4 planning and approval note. Sprint 5 now starts the SQL data build for customer enquiry and sales lead tracking. The Business Analyst prepares clear user stories and acceptance criteria so the Data Developer, QA Tester, and Power BI Developer can work from agreed requirements.

This stage does not mean the Power BI dashboard is being built today. Sprint 5 focuses on SQL data foundation. Sprint 6 will focus on Power BI dashboard build, validation, UAT, and sign-off.

3. 9 to 5 Real-Life Workday Scenario

Time	Activity	Real-life scenario
09:00 - 09:15	Daily stand-up / Sprint 5 kick-off	Scrum Master confirms Sprint 5 goal. BA confirms SQL stories will be refined. Data Developer, QA, and Power BI Developer confirm today's focus.
09:15 - 10:00	Jira backlog setup	BA creates or checks Sprint 5 backlog items. Product Owner confirms priority. Scrum Master confirms sprint board readiness.
10:00 - 11:00	SQL technical review	Data Developer reviews SQL Data Requirement Document and Logical Data Relationship Diagram. BA answers field and relationship questions.
11:00 - 12:00	QA testability review	QA reviews SQL Validation Plan and asks what acceptance criteria should prove data quality. BA notes clarifications.
12:00 - 01:00	Lunch	No project work.
01:00 - 02:30	BA story writing	BA writes SQL build user stories and acceptance criteria for Sprint 5.
02:30 - 03:30	Product Owner review	Product Owner reviews priority and confirms stories support business reporting value.
03:30 - 04:15	Data Developer and QA review	Data Developer checks feasibility. QA checks that acceptance criteria can be validated.
04:15 - 04:30	Jira and Confluence update	BA updates Jira and Confluence manually on

		behalf of the virtual team.
--	--	-----------------------------

4. What I Need to Do as Business Analyst

- Prepare SQL build user stories for Sprint 5.
- Write clear acceptance criteria for each story.
- Link user stories to SQL Data Requirement Document, Logical Data Relationship Diagram, SQL Validation Plan, and Power BI Dashboard Requirement Document.
- Confirm priority with Product Owner.
- Clarify SQL field rules with Data Developer.
- Confirm validation approach with QA Tester.
- Confirm Power BI readiness expectations with Power BI Developer.
- Update Jira manually and upload this Word document to Confluence.

5. What Other Team Members Are Doing in Parallel

Role	Parallel activity
Scrum Master	Facilitates Sprint 5 start, tracks progress, confirms that stories are ready and team understands sprint goal.
Product Owner	Confirms business priority and accepts that the SQL build stories support enquiry and lead tracking reporting.
Business Owner	Confirms the business value of tracking enquiries, quote requests, lead status, follow-ups, and enquiry sources.
Data Developer	Reviews SQL fields, relationships, sample data needs, and SQL view requirements. Starts preparing for SQL table build.
QA Tester	Reviews acceptance criteria and prepares validation checks for missing data, duplicate leads, lead status, and follow-up completeness.
Power BI Developer	Checks whether planned SQL outputs will support Sprint 6 dashboard KPIs and filters.
DevOps	Confirms whether any SQL environment or repository access is needed. No major deployment activity yet.
Business Analyst	Prepares stories, acceptance criteria, Jira updates, Confluence page, and clarification notes.

6. Sprint 5 Backlog Items

ID	Type	Summary	Owner	Status
S5-T01	Task	Prepare Sprint 5 Start and Planning Notes	BA	Done
S5-T02	Task	Prepare SQL Build User Stories and Acceptance Criteria	BA	In Progress to Done
S5-S01	Story	Create SQL tables for customer enquiry and lead tracking	Data Developer	To Do
S5-S02	Story	Create sample enquiry and quote request data	Data Developer	To Do
S5-S03	Story	Create SQL views for Power BI reporting	Data Developer	To Do
S5-T03	Task	Review SQL build against data requirements	BA	To Do
S5-T04	Task	Run SQL validation checks	QA Tester	To Do
S5-T05	Task	Review SQL output for Power BI readiness	Power BI Developer	To Do
S5-T06	Task	Prepare SQL Build Tracker	BA	To Do

7. SQL Build User Stories and Acceptance Criteria

Story ID	User story	Acceptance criteria
S5-S01	As a business user, I want customer enquiry data to be stored in SQL so that enquiries can be tracked and reported later.	Customer, Enquiry, Product Category, Lead Status, Follow-up, Enquiry Source tables are created as per agreed data requirements. Required fields are included. Relationships are reviewed by BA and Data Developer. No real customer data is used in sample environment.
S5-S02	As a business user, I want quote request data to be captured so that the business can track quote demand by category and customer need.	Quote request data includes enquiry reference, product category, vehicle details, part details, created date, and status. Quote request records can be linked back to the enquiry record. Sample data supports more than one product category.
S5-S03	As a business user, I want lead status and follow-up details to be captured so that pending actions can be monitored.	Lead status values include New, Contacted, Quote Sent, Converted, Closed, and Lost. Follow-up note includes owner, due date, note, and outcome. Pending follow-up records can be identified.
S5-S04	As a reporting user, I want enquiry source and newsletter consent data to be captured so that reporting and consent tracking are available.	Enquiry source includes Website Form, Phone, Email, Referral, and Other. Newsletter consent is stored separately from quote enquiry consent. Unsubscribe status can be captured for future reporting.
S5-S05	As a Power BI Developer, I want SQL views to be available so that dashboard KPIs can be built from clean reporting data.	Views support total enquiries, quote requests, top categories, lead status count, pending follow-ups, monthly trend, enquiry source, and conversion rate. View names and fields are documented for Power BI handover.

8. Jira Step-by-Step Update

You need to update Jira manually on behalf of the virtual team.

Step	Jira action
1	Go to Jira Backlog and confirm Epic exists: Phase 2 SQL and Power BI Dashboard Delivery.
2	Confirm Sprint 5 exists: Sprint 5 SQL Data Build, June 20XX.
3	Create the backlog items listed in Section 6 if not already created.
4	Drag selected items into Sprint 5.
5	Click Start Sprint if the sprint is not already active.
6	Keep all new items in To Do first.
7	Move S5-T02 Prepare SQL Build User Stories and Acceptance Criteria from To Do to In Progress when you start this document.
8	After the Word document is completed and uploaded to Confluence, move S5-T02 from In Progress to Done.
9	Keep Data Developer stories in To Do until the virtual Data Developer starts SQL build on Sprint 5 Day 2.
10	Add links between S5-S01, S5-S02, S5-S03 and the SQL Data Requirement Document where possible.

9. Jira Field Values for This BA Task

Jira field	Value
Project	Customer Enquiry Website Delivery
Work type	Task
Summary	Prepare SQL Build User Stories and Acceptance Criteria
Status flow	To Do -> In Progress -> Done
Sprint	Sprint 5 SQL Data Build
Parent/Epic	Phase 2 SQL and Power BI Dashboard Delivery
Assignee	Shiv Satyam Singh
Reporter	Shiv Satyam Singh
Priority	Medium
Labels	sprint-5, sql-build, user-stories, acceptance-criteria, phase-2

Story points	Leave blank for BA documentation task
Start date	June 20XX
Due date	June 20XX
Linked issues	Link to SQL Data Requirement Document, SQL Validation Plan, and Power BI Dashboard Requirement Document

10. Confluence Update

You need to update Confluence manually.

1. Create page title: SQL Build User Stories and Acceptance Criteria.
2. Location: Phase 2 Approved Delivery / Sprint 5 SQL Data Build.
3. Paste the key user stories and acceptance criteria from this document.
4. Attach this Word file.
5. Add linked Jira item key when available.
6. Set page status as Reviewed after Product Owner and Data Developer review.

11. Compliance Consideration

The SQL build will involve customer enquiry data. From BA perspective, track these points for confirmation with the Business Owner or relevant advisor:

- Customer personal data capture
- Consent wording
- Newsletter consent and unsubscribe status
- Data retention
- Access control
- Dashboard export rules
- Use of sample data instead of real customer data during build and testing

12. SQL and Power BI Involvement

Area	Involvement
SQL	Sprint 5 focuses on SQL tables, relationships, sample data, SQL views, and validation readiness.
Power BI	Power BI dashboard is not built in this stage. Power BI Developer reviews SQL output expectations for Sprint 6.

13. Expected Output

- Sprint 5 SQL build user stories are ready.
- Acceptance criteria are clear and testable.
- Data Developer understands SQL build scope.
- QA Tester understands validation expectations.
- Power BI Developer understands expected SQL outputs.
- Jira Sprint 5 backlog is ready for execution.
- Confluence page is ready with Word document attached.

14. Portfolio Evidence

Save this file under Phase 2 Approved Delivery / Sprint 5 SQL Data Build:

Auto Parts SME | BA Portfolio Evidence | Confidential and anonymised sample

- Sprint_5_Stage_56_SQL_Build_User_Stories_and_Acceptance_Criteria.docx

15. Interview Explanation

You can say:

After Phase 2 approval, I supported Sprint 5 SQL data build planning by preparing SQL build user stories and acceptance criteria. I worked with the Product Owner to confirm priority, with the Data Developer to confirm feasibility, with QA to ensure validation was testable, and with the Power BI Developer to confirm reporting data readiness for Sprint 6.

16. CV Bullet, Only If Meaningful

Prepared SQL build user stories and acceptance criteria for an approved Phase 2 enquiry and lead tracking enhancement, supporting Data Developer build, QA validation, and Power BI reporting readiness.

17. Next Action

Next stage: Stage 57: SQL Build Tracker

Phase 2 Logical Data Relationship Diagram

Official Website and Customer Enquiry Management System for a UK Auto Parts SME

Field	Details
Client Name Used	Auto Parts SME
Project Phase	Phase 2 Future Enhancement
Working Date	June 20XX
Prepared By	Business Analyst
Purpose	Define a logical data relationship view for enquiry and sales lead tracking before SQL and Power BI design.

Note: This is a logical BA-level diagram. It is not a final physical database design. Final table structure, indexes, keys, data types, security rules, and retention rules should be confirmed by the technical team and relevant business/compliance owner.

1. Diagram

The diagram below shows the proposed logical relationship between customer enquiry data, quote requests, product categories, lead status, follow-up notes, enquiry source, and newsletter subscription data.

Phase 2 Logical Data Relationship Diagram

Customer Enquiry and Sales Lead Tracking Dashboard - SQL and Power BI Future Enhancement

2. Logical Entities

Entity	Business Purpose
Customer	Stores basic customer contact details captured through enquiry, quote, feedback, or newsletter forms.
Enquiry	Stores the main customer enquiry record submitted through the website.
Quote Request	Stores additional quote-specific details such as product category and vehicle details.
Product Category	Stores the agreed auto parts categories used in enquiry and reporting.
Lead Status	Stores lead progress such as New, Contacted, Quoted, Won, Lost, or Closed.
Follow-up Note	Stores business follow-up notes and next action dates for each enquiry.
Enquiry Source	Stores where the enquiry came from, such as website quote form, contact form, feedback form, or newsletter.
Newsletter Subscription	Stores newsletter consent and unsubscribe status.

3. Relationship Summary

Relationship	Meaning
Customer to Enquiry	One customer can submit many enquiries. Each enquiry should belong to one customer record where contact details are available.
Customer to Newsletter Subscription	One customer may have one or more newsletter subscription records depending on consent and unsubscribe history.
Enquiry Source to Enquiry	One enquiry source can be linked to many enquiries for reporting by source.
Enquiry to Quote Request	One enquiry may become one or more quote requests where the customer asks for parts pricing or availability response.
Product Category to Quote Request	One product category can be selected in many quote requests.
Enquiry to Lead Status	One enquiry can have multiple status updates during follow-up.
Enquiry to Follow-up Note	One enquiry can have many follow-up notes.

4. BA Validation Notes

Validation Area	BA Note
Data completeness	Customer name and email should be captured for quote and contact enquiries where required by the form.
Consent	Consent flag should be captured for forms where personal data is used to respond.
Lead status	Lead status values should be standardised to avoid reporting mismatch in Power BI.
Product category	Product category values should match the approved website categories.
Follow-up tracking	Follow-up notes should include follow-up date, next action date, and owner where required.
Reporting readiness	Fields should support Power BI metrics such as total enquiries, quote requests, top categories, pending follow-ups, conversion rate, and monthly trend.

5. Portfolio and Interview Note

Portfolio use: Upload the PNG diagram, editable Draw.io file, Word document, and PDF under the Phase 2 SQL and Power BI Reporting Enhancement section.

Interview explanation: For Phase 2, I prepared a logical data relationship diagram to show how customer, enquiry, quote request, product category, lead status, follow-up, source, and newsletter data would connect for future SQL and Power BI reporting. This helped translate business reporting needs into a structured data requirement view before technical database design.

Power BI Dashboard Wireframe

Official Website and Customer Enquiry Management System for a UK Auto Parts SME

Client: Auto Parts SME | Phase 2 Future Enhancement | Date: June 20XX

Field	Details
Document Owner	Business Analyst
Sprint	Sprint 4 Future SQL and Power BI Enhancement
Stage	Stage 48
Status	Draft for stakeholder review
Confidentiality note	Anonymised portfolio version. No real client details used.

1. Purpose

This wireframe shows the proposed layout for the future Power BI, meaning Business Intelligence, dashboard. The dashboard will help the business track website enquiries, quote requests, lead status, follow-ups, enquiry source, and product category performance.

2. Scope

This is a Phase 2 future enhancement wireframe. It does not confirm that the dashboard has been technically built. It confirms the proposed reporting layout and business view required before dashboard development.

3. Users

Primary users are the Business Owner, Sales User, and Product Owner. The Business Analyst supports requirement validation and acceptance criteria review.

Figure 1: Proposed Power BI dashboard wireframe for customer enquiry and sales lead tracking.

4. Dashboard Wireframe Components

Component	Requirement
Header and Filters	Dashboard title, date range, product category, lead status, and enquiry source filters.
KPI Cards	Total enquiries, quote requests, pending follow-ups, and conversion rate.
Monthly Enquiry Trend	Line chart to show enquiry trend by month.
Top Product Categories	Bar chart to show the most requested auto parts categories.
Lead Status Summary	Donut or stacked visual showing New, In Progress, Quoted, Converted, and Closed leads.
Pending Follow-up Tracker	Table showing enquiries requiring follow-up, owner, due date, and status.
Enquiry Source Breakdown	Bar chart showing website, phone, email, referral, and other enquiry sources.

5. Key Performance Indicators

KPI	Business meaning
Total Enquiries	Count of all submitted enquiries in selected period
Quote Requests	Count of enquiries submitted through the Request a Quote form

Pending Follow-ups	Count of enquiries not yet closed and needing action
Conversion Rate	Converted leads divided by total quote requests
Top Categories	Most requested product categories by enquiry/quote count
Monthly Trend	Number of enquiries by month

6. Data and Compliance Notes

Area	Note
Data source	Expected source is future SQL data for customers, enquiries, quote requests, product categories, lead status, follow-up notes, enquiry source, and newsletter subscription.
Refresh expectation	Daily refresh is enough for a small business. Real-time refresh is not required for Phase 2 requirements.
Access consideration	Dashboard access should be limited to authorised business users. Customer contact details may need masking depending on agreed policy.
Data quality	Missing contact details, duplicate leads, invalid status values, and missing follow-up dates should be highlighted before dashboard use.
Compliance note	Personal data use, retention, export, and newsletter consent reporting should be confirmed by the Business Owner or relevant advisor.

7. Acceptance Criteria

- Dashboard wireframe includes required KPIs and filters.
- Wireframe supports enquiry, quote request, category, lead status, follow-up, and source reporting.
- Wireframe avoids personal data exposure unless access control and masking are confirmed.
- Wireframe is linked to SQL data requirements and logical data relationship diagram.
- Business users can understand what the future Power BI dashboard will show.

8. Portfolio Note

This wireframe can be shown under Phase 2: SQL and Power BI Reporting Enhancement. Clearly mention that it is a future enhancement requirement artefact, not a fully delivered production dashboard.

9. BA Interview Explanation

I prepared a Power BI dashboard wireframe to translate reporting requirements into a simple visual layout. It showed KPIs, filters, trend chart, category analysis, lead status summary, pending follow-up tracker, and enquiry source breakdown. This helped business users validate what they expected from the future dashboard before technical build.

Dashboard Review Against Business Requirements

Auto Parts SME | Phase 2 SQL and Power BI Reporting | Sprint 6

Field	Details
Project	Official Website and Customer Enquiry Management System for a UK Auto Parts SME
Phase	Phase 2 SQL and Power BI Reporting
Sprint	Sprint 6: Power BI Dashboard Build
Document date	June 20XX
Prepared by	Business Analyst
Review purpose	Confirm that the Power BI dashboard meets approved business reporting requirements

1. Review Objective

The objective of this review is to confirm that the Power BI dashboard built in Sprint 6 satisfies the approved business reporting needs for customer enquiry tracking, quote request analysis, lead pipeline monitoring, and management reporting. The review also checks that the dashboard is ready for UAT preparation and stakeholder review.

2. Dashboard Scope Reviewed

Area	Reviewed item
KPI cards	Total Customers, Total Enquiries, Total Quotes, Quote Value, Average Quote Value, Open Enquiries, Closed Enquiries, Quote Request Rate
Charts and visuals	Enquiries by Source, Quote Value by Category, Active Lead Pipeline Status, Monthly Enquiry Trend
Filters / slicers	Month, Enquiry Source, Product Category
Data source	Validated SQL Server Express reporting views from AutoPartsSME database
Validation basis	Dashboard numbers were checked against SQL outputs during Sprint 6 QA validation

3. Business Requirement Traceability Review

Business requirement	Dashboard evidence	Review status	BA review note
Track total customers	Total Customers KPI card	Met	Customer volume is visible as a top-level KPI.
Track total enquiries	Total Enquiries KPI card	Met	Total enquiry count is available for management overview.
Track quote requests	Total Quotes KPI card	Met	Quote request volume is visible for sales enquiry tracking.
Track quote value	Quote Value and Average Quote Value KPI cards	Met	Total and average quote values support commercial reporting.
Track enquiry status	Open Enquiries and Closed Enquiries KPI cards	Met	Open and closed enquiry counts support operational follow-up.
Measure quote request rate	Quote Request Rate KPI card	Met	Shows the percentage of enquiries with at least one quote request.
Analyse enquiry source	Enquiries by Source chart and Enquiry Source slicer	Met	Shows which channels generate customer enquiries.
Analyse quote value by category	Quote Value by Category chart and Product Category slicer	Met	Shows quote value distribution across product categories.
Monitor lead pipeline	Active Lead Pipeline Status donut chart	Met	Shows active lead records by current lead status.
Track enquiry trend over time	Monthly Enquiry Trend chart and Month slicer	Met	Shows enquiry movement by month.
Support dashboard filtering	Month, Enquiry Source, Product Category dropdown slicers	Met	Users can filter dashboard views for focused analysis.

4. KPI and Visual Review Summary

Dashboard item	Visual type	Validation approach	Status
Total Customers	KPI card	Validated against SQL	Pass
Total Enquiries	KPI card	Validated against SQL	Pass
Total Quotes	KPI card	Validated against SQL	Pass
Total Quote Value	KPI card	Validated against SQL	Pass
Average Quote Value	KPI card	Validated against SQL	Pass
Open Enquiries	KPI card	Validated against SQL	Pass
Closed Enquiries	KPI card	Validated against SQL	Pass
Quote Request Rate	KPI card	Validated against SQL	Pass
Enquiries by Source	Column chart	Validated against SQL grouped output	Pass
Quote Value by Category	Column chart	Validated against SQL grouped output	Pass
Active Lead Pipeline Status	Donut chart	Validated against active lead status output	Pass
Monthly Enquiry Trend	Column chart	Validated against monthly SQL output	Pass

5. BA Observations

The dashboard supports the agreed business objective of monitoring enquiry volume, quote activity, lead status, source performance, product category demand, and monthly enquiry trends.

The dashboard uses validated SQL reporting views prepared during Sprint 5 and confirmed during Sprint 6 validation.

KPI cards are suitable for management-level summary, while charts and slicers support deeper analysis by source, category, status, and month.

The Quote Request Rate KPI was reviewed for business meaning and represents enquiries that have at least one quote request, avoiding misleading values above 100 percent.

No critical dashboard requirement gap was identified during this BA review.

6. Risks, Issues, and Follow-up Actions

Risk / Issue	Impact	Action
Dashboard data is based on sample data	Low	Use as portfolio/demo evidence only; real business reporting would require production data refresh process.
Some visuals depend on SQL reporting view structure	Low	Maintain SQL view names and fields if dashboard is refreshed or rebuilt.
Stakeholder preference for layout/colours may change	Low	Capture feedback during dashboard UAT.

7. Review Decision

Review outcome: Passed. The Power BI dashboard meets the approved business reporting requirements and is ready for Dashboard UAT Plan preparation.

Item	Decision / Action
BA review status	Passed
Ready for next task	Prepare Dashboard UAT Plan
Jira recommendation	Move Review Dashboard Against Business Requirements from In Progress to Done
Confluence update	Attach this document and add review completion note

SQL Validation Plan

Official Website and Customer Enquiry Management System for a UK Auto Parts SME

Field	Value
Client Name	Confidential Auto Parts SME
Project Phase	Phase 2 Future Enhancement - SQL and Power BI Reporting
Sprint	Sprint 4 Future SQL and Power BI Enhancement
Working Date	June 20XX
Document Owner	Business Analyst
Version	v1.0
Status	Draft for Business and Data Review

Confidentiality note: This document is anonymised for BA portfolio use. It does not include any real client name, real website URL, real logo, real address, real phone number, real email, or identifiable business detail.

1. Purpose

This SQL Validation Plan defines how Phase 2 enquiry and lead tracking data should be checked before it is used for Power BI reporting. SQL means Structured Query Language. The plan focuses on business validation rules, data quality checks, and reporting readiness for the future dashboard.

2. Scope

In Scope	Out of Scope
Validation of enquiry, quote request, product category, lead status, follow-up, enquiry source, and newsletter consent data.	Building the actual SQL database, writing production stored procedures, creating a live Power BI dashboard, or connecting to real client systems.
Business-level validation rules for missing details, duplicate leads, lead status accuracy, follow-up completeness, and dashboard numbers.	Legal advice, final data protection approval, or production data migration.
Sample SQL logic for BA understanding and review with data/technical team.	Use of real customer personal data in portfolio evidence.

3. Validation Objectives

- Confirm that mandatory customer enquiry data is present before reporting.
- Identify duplicate leads so the business does not follow up the same enquiry multiple times.
- Check that lead status values are valid and consistent.
- Confirm quote request records are linked to product categories.
- Check that pending follow-ups have due dates and owners where required.
- Confirm dashboard numbers can be traced back to SQL source data.
- Check newsletter consent and unsubscribe status are captured clearly.

4. Proposed Data Areas to Validate

Data Area	Example Fields	Validation Need
Customer	Customer ID, full name, email, phone	Check mandatory contact fields and avoid duplicate customer records.
Enquiry	Enquiry ID, customer ID, enquiry date, enquiry type, source	Check every enquiry has a valid customer, date, source, and status.
Quote Request	Quote ID, enquiry ID, category ID, vehicle make/model/year, part details	Check quote requests are linked to enquiry and product category.
Product Category	Category ID, category name, active flag	Check only approved categories are used in reporting.

Data Area	Example Fields	Validation Need
Lead Status	Lead ID, enquiry ID, status, status date	Check status values such as New, Contacted, Quote Sent, Won, Lost, Closed.
Follow-up Note	Follow-up ID, enquiry ID, owner, due date, note	Check pending follow-ups have owner and due date.
Enquiry Source	Source ID, source name	Check source names are consistent for reporting.
Newsletter Subscription	Email, consent date, unsubscribe flag	Check consent and unsubscribe status are available.

5. SQL Validation Scenario List

ID	Validation Area	Business Rule	Expected Result	Priority
SQL-VAL-01	Missing contact details	Customer enquiry must include customer name and email. Phone is optional.	Records with blank name or email should be flagged for correction.	High
SQL-VAL-02	Invalid email format	Email address should contain a valid format before it is used for follow-up.	Invalid email records should be listed for review.	High
SQL-VAL-03	Duplicate leads	Same email plus same product category within short period may be duplicate.	Possible duplicate leads should be flagged, not automatically deleted.	Medium
SQL-VAL-04	Missing product category	Quote requests should have product category selected.	Quote records without category should be flagged.	High
SQL-VAL-05	Lead status accuracy	Lead status should use approved status list only.	Any unknown status should be flagged.	High
SQL-VAL-06	Pending follow-up completeness	Pending follow-up should have owner and due date.	Records missing owner/due date should appear in exception list.	High
SQL-VAL-07	Closed lead follow-up check	Closed leads should not appear as pending follow-up.	Closed leads appearing as pending should be flagged.	Medium
SQL-VAL-08	Newsletter consent	Newsletter subscription should have consent date and unsubscribe status.	Missing consent date should be flagged.	High
SQL-VAL-09	Dashboard total enquiries	Total enquiry count in Power BI should match SQL enquiry count for selected date range.	Dashboard and SQL numbers should match.	High
SQL-VAL-10	Monthly trend readiness	Enquiry date should be available for monthly trend reporting.	Records without enquiry date should be flagged.	Medium

6. Sample SQL Logic for BA Review

These are sample validation checks for discussion with the technical team. They are not production-ready scripts.

```
-- Check missing mandatory contact details
SELECT enquiry_id, customer_name, email_address
FROM enquiry_view
WHERE customer_name IS NULL
      OR email_address IS NULL;
```

```
-- Check possible duplicate leads
SELECT email_address, product_category, COUNT(*) AS enquiry_count
FROM enquiry_view
GROUP BY email_address, product_category
HAVING COUNT(*) > 1;
```

```
-- Check invalid lead status values
SELECT enquiry_id, lead_status
FROM lead_status_view
WHERE lead_status NOT IN ('New', 'Contacted', 'Quote Sent', 'Won', 'Lost', 'Closed');
```

```
-- Check pending follow-ups without owner or due date
```

```
SELECT enquiry_id, follow_up_owner, follow_up_due_date
FROM follow_up_view
WHERE lead_status = 'Pending Follow-up'
AND (follow_up_owner IS NULL OR follow_up_due_date IS NULL);
```

7. Dashboard Number Reconciliation Checks

Power BI Metric	SQL Source Check	Expected Validation Outcome
Total Enquiries	Count enquiry_id from enquiry table for selected date range.	Power BI total should match SQL total.
Quote Requests	Count quote_request_id from quote request table.	Power BI quote count should match SQL count.
Top Product Categories	Group quote requests by product category.	Top categories should match SQL grouped result.
Pending Follow-ups	Count enquiries with pending follow-up status and due date.	Dashboard pending number should match SQL exception/lead view.
Conversion Rate	Won leads divided by total qualified leads.	Formula should be agreed and consistent in SQL and Power BI.
Monthly Enquiry Trend	Group enquiries by enquiry month.	Trend chart should match SQL monthly count.

8. Roles and Responsibilities

Role	Responsibility
Business Analyst	Defines validation scenarios, business rules, expected results, and supports review of exceptions.
Product Owner	Confirms priority of reporting checks and acceptance criteria.
Business Owner	Confirms data meaning, lead status definitions, and follow-up rules.
Data/SQL Developer	Creates technical SQL queries, views, and validation scripts.
Power BI Developer	Uses validated SQL data for dashboard visuals and reconciles dashboard numbers.
Compliance Owner/Advisor	Confirms data usage, consent, retention, access, and reporting rules where needed.

9. Acceptance Criteria

- Mandatory data validation checks are documented for enquiry and lead tracking data.
- Duplicate lead identification approach is documented as possible duplicate, not automatic deletion.
- Lead status approved values are documented and ready for technical validation.
- Follow-up validation checks are documented for owner, due date, and pending status.
- Newsletter consent and unsubscribe data checks are included.
- Dashboard reconciliation checks are documented for key Power BI metrics.
- Open compliance points are clearly marked for business/legal confirmation.

10. Assumptions and Open Questions

Type	Item
Assumption	Phase 2 uses sample/anonymised data for portfolio evidence.
Assumption	Final SQL table design will be owned by the technical team.
Open Question	What exact lead statuses should the business use in the final process?
Open Question	How long should enquiry and follow-up data be retained?
Open Question	Who can access customer contact details in the dashboard?
Open Question	Should Power BI show customer-level details or only aggregated numbers?

11. Portfolio Note

This document is suitable for portfolio evidence as a BA artefact. It shows future SQL validation planning and Power BI reporting readiness. It should be presented as requirements and validation planning work, not as a delivered production database or live dashboard.

Dashboard UAT Plan

Official Website and Customer Enquiry Management System for a UK Auto Parts SME

1. Document Control

Field	Details
Project display name	Official Website and Customer Enquiry Management System for a UK Auto Parts SME
Document name	Dashboard UAT Plan
Phase	Phase 2 - SQL and Power BI Reporting
Sprint	Sprint 6: Power BI Dashboard Build
Document date	June 20XX
Prepared by	Business Analyst
Status	Draft for UAT execution

2. Purpose

This UAT plan defines how business users will review and test the Power BI dashboard before Sprint 6 closure. The testing focuses on KPI accuracy, dashboard usability, filter behaviour, and business reporting value.

3. UAT Scope

In scope	Out of scope
Review KPI cards for customer, enquiry, quote, value, status, and quote request rate measures.	Testing live website form submission or production data refresh.
Review charts for enquiry source, quote value by category, active lead pipeline status, and monthly trend.	Testing online payment, checkout, inventory, or customer login functionality.
Review dropdown slicers for month, enquiry source, and product category.	Performance testing, security testing, and production deployment testing.
Confirm dashboard numbers align with SQL validation results.	Testing new SQL table design changes outside approved Sprint 5 scope.

4. UAT Roles and Responsibilities

Role	Responsibility
Product Owner / Business Representative	Review dashboard usefulness, KPI clarity, and reporting value.
Business Analyst	Coordinate UAT, explain test scenarios, capture feedback, and support sign-off.
Power BI Developer	Support dashboard fixes if visual, model, or measure issues are identified.
QA Tester	Support evidence capture and verify test outcomes against expected results.
Scrum Master	Track UAT activity, blockers, and sprint completion readiness.

5. UAT Entry Criteria

Entry criterion	Status
SQL reporting views loaded into Power BI Desktop.	Met
Data model relationships reviewed.	Met
DAX KPI measures created and verified.	Met
Dashboard visuals and dropdown slicers built.	Met
Dashboard numbers validated against SQL output.	Met
Dashboard review against business requirements completed.	Met

6. UAT Test Scenarios

ID	Test scenario	Expected result	Status
UAT-01	Review dashboard KPI cards.	KPI cards are visible and understandable for business reporting.	Ready
UAT-02	Validate Total Customers, Total Enquiries, Total Quotes, Quote Value, Average Quote Value, Open Enquiries, Closed Enquiries, and Quote Request Rate.	Dashboard values match SQL validation results.	Ready
UAT-03	Review Enquiries by Source chart.	Chart clearly shows enquiry volume by source.	Ready
UAT-04	Review Quote Value by Product Category chart.	Chart clearly shows quote value by product category.	Ready
UAT-05	Review Active Lead Pipeline Status donut chart.	Chart clearly shows active lead status distribution.	Ready
UAT-06	Review Monthly Enquiry Trend chart.	Chart clearly shows enquiry volume by month.	Ready
UAT-07	Use Month dropdown slicer.	Dashboard visuals filter correctly by selected month.	Ready
UAT-08	Use Enquiry Source dropdown slicer.	Dashboard visuals filter correctly by selected enquiry source.	Ready
UAT-09	Use Product Category dropdown slicer.	Dashboard visuals filter correctly by selected product category.	Ready
UAT-10	Review dashboard layout and readability.	Dashboard is clear, readable, and suitable for business review.	Ready

7. UAT Evidence Required

Evidence item	Description
Dashboard screenshot	Full Power BI dashboard page showing KPI cards, charts, and slicers.
SQL validation screenshot	SQL Server Management Studio results supporting dashboard value validation.
UAT notes	Business review notes, comments, and any identified action items.
UAT sign-off	Confirmation that dashboard is accepted for Phase 2 closure.

8. UAT Exit Criteria

Exit criterion	Acceptance condition
Dashboard numbers accepted	Business user confirms KPI values and key visuals are suitable for reporting.
Filters accepted	Month, enquiry source, and product category slicers work as expected.
No critical issue open	No blocker or high-severity issue remains unresolved.
UAT evidence captured	Screenshots and review notes are attached in Confluence.
Business sign-off received	Product Owner or business representative confirms dashboard acceptance.

9. Risks and Notes

Risk / Note	Mitigation
Sample data is limited to portfolio simulation scope.	Use dashboard as sample evidence, not production reporting.
Quote Request Rate shows 100% because all sample enquiries have at least one quote request.	Document KPI meaning clearly as Quote Request Rate.
Active Lead Pipeline Status uses active lead records, not all enquiries.	Use clear dashboard title and explain in review notes.

10. Approval Section

Role	Name	Decision	Date / Notes
Product Owner / Business Representative		Accepted / Rework Required	
Business Analyst		UAT completed	
Power BI Developer		Ready for closure	

Conclusion: The dashboard is ready for UAT execution. Once UAT evidence and sign-off are captured, Sprint 6 can proceed to UAT evidence capture and Phase 2 closure activities.

Phase 2 Closure Summary

Official Website and Customer Enquiry Management System for a UK Auto Parts SME

Phase 2: SQL and Power BI Reporting | Closure Date: June 20XX

1. Document Control

Item	Details
Document name	Phase 2 Closure Summary
Project display name	Auto Parts SME
Phase	Phase 2 - SQL and Power BI Reporting
Sprint coverage	Sprint 5 SQL Data Build and Sprint 6 Power BI Dashboard Build
Prepared by	Business Analyst / Scrum Master
Document date	June 20XX
Version	1.0
Status	Final - Phase Closure

2. Purpose of This Document

This document formally closes Phase 2 of the Auto Parts SME project. Phase 2 focused on creating the SQL data foundation, reporting views, Power BI dashboard, dashboard validation, and UAT evidence required for customer enquiry and quote reporting.

The closure summary confirms completed deliverables, validation outcomes, UAT status, remaining risks, handover notes, and the final phase decision.

3. Phase 2 Scope Summary

Scope area	Closure position
SQL database build	Completed. Tables, keys, relationships, and sample data were created for enquiry and quote reporting.
SQL reporting views	Completed. Reporting views were created and loaded into Power BI.
Power BI dashboard	Completed. KPI cards, charts, and slicers were built for business reporting.
Dashboard validation	Completed. Dashboard values were validated against SQL query outputs.
Dashboard UAT	Completed. UAT screenshots and filter evidence were captured.
Phase 2 documentation	Completed. Sprint and phase evidence documents were prepared and attached in Confluence.

4. Completed Sprint Summary

Sprint	Main objective	Key outputs	Closure status
Sprint 5 - SQL Data Build	Build and validate the SQL data foundation for Power BI reporting.	ERD, SQL tables, sample data, SQL views, SQL validation, and Power BI readiness testing.	Closed
Sprint 6 - Power BI Dashboard Build	Build, validate, and test the Power BI dashboard using approved SQL reporting views.	Dashboard requirements review, Power BI connection verification, data model, DAX measures, dashboard visuals, SQL validation, UAT plan, UAT evidence, review notes, and retrospective notes.	Ready to close

5. Phase 2 Deliverables Completed

No.	Deliverable	Evidence / output	Status
1	Phase 2 SQL Data Requirement Document	Approved SQL reporting data requirements.	Done
2	Logical Data Relationship Diagram	ERD showing customer, enquiry, quote, lead status, follow-up, source, category, and newsletter relationships.	Done
3	SQL CREATE TABLE scripts	Tables created with primary keys, foreign keys, constraints, and business fields.	Done
4	Sample Data INSERT scripts	Realistic sample enquiry and quote request data added for testing and reporting.	Done
5	SQL Reporting Views	Eight reporting views prepared for Power BI.	Done
6	SQL Validation Evidence	SQL checks completed for keys, counts, constraints, and view outputs.	Done
7	Power BI Dashboard	KPI cards, charts, dropdown slicers, and dashboard visuals completed.	Done
8	DAX Measures	KPI measures created for customers, enquiries, quotes, values, statuses, and quote request rate.	Done
9	Dashboard Validation Against SQL	Power BI values matched SQL outputs.	Done
10	Dashboard UAT Plan and Evidence	UAT scenarios, screenshots, and filter evidence captured.	Done
11	Sprint Review and Retrospective Notes	Sprint 5 and Sprint 6 review and retrospective notes completed.	Done

6. Power BI Dashboard Closure Review

Dashboard component	Business purpose	Closure status
KPI cards	Summarise customers, enquiries, quotes, quote value, open/closed enquiries, average quote value, and quote request rate.	Accepted
Enquiries by Source chart	Shows which enquiry channels generate customer demand.	Accepted
Quote Value by Category chart	Shows which product categories generate higher quote value.	Accepted
Active Lead Pipeline Status chart	Shows active lead pipeline status distribution.	Accepted
Monthly Enquiry Trend chart	Shows enquiry trend by month.	Accepted
Dropdown slicers	Allow filtering by enquiry source, product category, and month.	Accepted

7. Validation and UAT Summary

Validation / UAT area	Result	Status
Dashboard KPI values validated against SQL	Total customers, total enquiries, total quotes, quote value, average quote value, open enquiries, closed enquiries, and quote request rate matched SQL outputs.	Pass
Enquiries by Source chart validated	SQL source counts matched Power BI chart values.	Pass
Quote Value by Category chart validated	SQL category quote values matched Power BI chart values.	Pass
Active Lead Pipeline Status chart validated	SQL lead status counts matched Power BI donut chart values.	Pass
Monthly Enquiry Trend chart validated	SQL monthly enquiry count matched Power BI chart.	Pass
Dashboard UAT evidence captured	Full dashboard and filter screenshots were captured.	Pass

8. Business Outcome

Phase 2 has delivered a working reporting foundation that allows the business to understand enquiry volume, quote activity, quote value, enquiry source performance, lead pipeline position, and product category demand.

- Business users can view key reporting metrics in a single Power BI dashboard.
- Dashboard filters allow users to analyse data by month, enquiry source, and product category.
- SQL validation confirms that dashboard values are aligned with the underlying database.
- UAT evidence confirms that the dashboard is usable and ready for portfolio closure.

9. Risks, Issues, and Closure Position

Area	Closure position
Open defects	No open blocking defects recorded at closure.
Data accuracy	Dashboard values were checked against SQL and passed validation.
Known limitation	Sample data is used for portfolio simulation; real business data would require refresh scheduling, security review, and production access control.
Dashboard publishing	Power BI Desktop dashboard is completed as portfolio evidence. Power BI Service publishing is outside this simulation scope.
Future enhancement	Dashboard can be enhanced later with customer drill-through, daily refresh, role-level security, and additional customer segmentation.

10. Handover Notes

- Keep the final Power BI file saved as Power_BI_Dashboard_Auto_Parts_SME_June_20XX.pbix.
- Keep SQL scripts, validation queries, dashboard screenshots, and UAT screenshots in the Phase 2 evidence folder.
- Attach closure summary and supporting evidence to the Confluence page for Phase 2 - Sprint 6 Power BI Dashboard Build.
- Update Jira closure comments and complete Sprint 6 after the remaining closure actions are done.

11. Phase 2 Closure Decision

Decision point	Outcome
Phase 2 completion decision	Phase 2 is ready for closure.
Reason	SQL build, Power BI dashboard build, validation, business review, and UAT evidence are completed.
Next action	Close Sprint 6 in Jira and archive Phase 2 evidence in Confluence / portfolio folder.

12. Sign-off

Role	Name / Representative	Decision	Date
Business Owner / Product Owner	Auto Parts SME representative	Accepted	June 20XX
Business Analyst	Project BA	Completed	June 20XX
Scrum Master	Project Scrum Master	Closed	June 20XX
