

Discovery Questions

Project Name

Digital STEM Content Delivery Platform

Document Purpose

This document lists the discovery questions required to understand business needs, user expectations, content requirements, approval workflow, system behaviour and testing expectations for the ABC School STEM Platform.

1. Questions for Principal / Product Owner

Business Goal

1. What is the main business objective of this platform?
2. Which problem should this platform solve for teachers?
3. Which classes should be included in the first release?
4. Which subjects should be included in the first release?
5. What is the expected benefit for classroom teaching?
6. How will ABC School measure success after release?

Scope and Priority

1. Which feature is most important for the first release?
2. Should teacher login be mandatory before accessing content?
3. Should only approved content be visible to teachers?
4. Should inactive content be hidden from teachers?
5. Who will decide content priority for each subject?

Approval

1. Who will approve learning content before it is published?
2. Can Subject Teachers approve their own subject content?
3. Does the Principal need final approval for all content?
4. What should happen if content is rejected?

5. Should rejected content go back to Draft status?

2. Questions for Subject Teachers

Teaching Need

1. Which topics are difficult to explain using normal classroom methods?
2. Which topics need 3D video?
3. Which topics need animated video?
4. Which topics need coding simulation?
5. Which topics need visual explanation?
6. Which topics need interactive web content?

Content Details

1. What class level is the content for?
2. What learning objective should each content item meet?
3. What key labels should appear in the content?
4. What should students understand after viewing the content?
5. What common mistakes should the content help avoid?
6. What should be the ideal duration of each content item?

Example Topics

1. Physics: electric circuit, force and motion, reflection and refraction
2. Chemistry: H₂O molecule, atomic structure, chemical bonding
3. Mathematics: 3D geometry, coordinate geometry, graphs
4. Computer Science: flowcharts, if else logic, loops, Python basics, HTML, CSS and SQL basics

3. Questions for Admin Staff

Content Management

1. What content details should Admin add in the system?
2. Should Admin be able to edit content details?
3. Should Admin be able to deactivate content?

4. Should Admin upload content files or only manage content records?
5. What fields are mandatory while adding content?
6. Should Admin assign content to class, subject and topic?

Content Status

1. What statuses are required for content?
2. Should the statuses be Draft, Under Review, Approved and Inactive?
3. Who can move content from Draft to Under Review?
4. Who can mark content as Approved?
5. Who can mark content as Inactive?

4. Questions for 3D Animation and Content Team

Content Creation

1. What input is needed from the Business Analyst before content creation starts?
2. What format should the Content Requirement Brief follow?
3. What file formats can be delivered for 3D video and animated video?
4. What information is needed for labels, scenes and visual flow?
5. What is the expected output format for coding simulations?
6. What is the estimated time to create one content item?

Storyboard

1. Do you need scene wise storyboard before creating content?
2. What level of detail is needed in each scene?
3. Should the storyboard include labels, narration and screen actions?
4. Who will review the storyboard before final content creation?

5. Questions for UI/UX Designer

Screen Layout

1. What should the Teacher dashboard show after login?
2. How should the STEM and Coding library be displayed?

3. Where should class, subject and topic filters appear?
4. Should content cards show title, class, subject, topic and content type?
5. How should classroom display mode look?
6. Should classroom display mode hide admin controls and unnecessary buttons?

User Experience

1. How many clicks should a teacher need to open content?
2. Should search be available along with filters?
3. Should content open in the same tab or a new full screen view?
4. What should happen if content fails to load?

6. Questions for Developer Team

System Behaviour

1. What user roles will be created in the system?
2. How will role based access be implemented?
3. How will content records be stored?
4. How will filters work for class, subject and topic?
5. How will approved content be separated from draft content?
6. What technical constraints exist for video and simulation playback?

Integration and Performance

1. Will content be stored inside the application or linked from a storage location?
2. What file size limit should be considered?
3. What browsers should the platform support?
4. What internet speed is expected in classrooms?
5. Should the platform show a loading message while content opens?

7. Questions for QA Tester

Testing Scope

1. What test scenarios are required for teacher login?

2. What test scenarios are required for content library view?
3. What test scenarios are required for class, subject and topic filters?
4. What test scenarios are required for content launch?
5. What test scenarios are required for classroom display mode?
6. What test scenarios are required for admin content management?
7. What test scenarios are required for approval workflow?

Acceptance Criteria

1. How should QA validate that only approved content is visible to teachers?
2. How should QA validate role based access?
3. How should QA validate content status changes?
4. How should QA validate browser compatibility?
5. How should QA record test results?

8. Questions for UAT Users

User Acceptance Testing

1. Can teachers log in without support?
2. Can teachers find content quickly?
3. Are class, subject and topic filters easy to use?
4. Does classroom display mode work properly on classroom screen?
5. Is the content useful for teaching?
6. Is the approval process clear for Principal and Subject Teachers?
7. Is the platform ready for classroom use?

Key Clarifications Required

1. First release classes
2. First release subjects
3. First release topics
4. Content approval owner
5. Required content statuses
6. Mandatory content fields

7. Classroom display mode expectations
8. Browser and device expectations
9. Content file format and size expectations
10. UAT approval process
