

Power BI Dashboard Wireframe

Official Website and Customer Enquiry Management System for a UK Auto Parts SME

Client: Auto Parts SME | Phase 2 Future Enhancement | Date: 29 May 2026

Field	Details
Document Owner	Business Analyst
Sprint	Sprint 4 Future SQL and Power BI Enhancement
Stage	Stage 48
Status	Draft for stakeholder review
Confidentiality note	Anonymised portfolio version. No real client details used.

1. Purpose

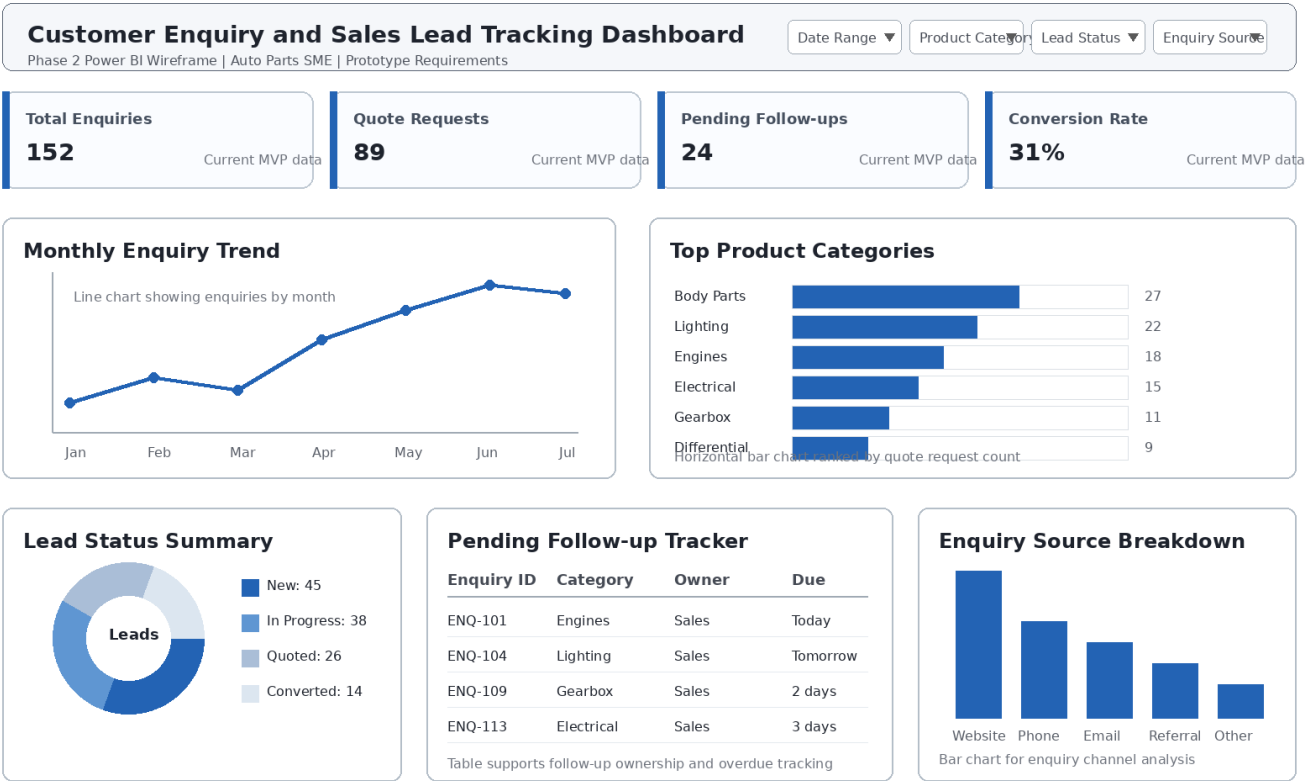

This wireframe shows the proposed layout for the future Power BI, meaning Business Intelligence, dashboard. The dashboard will help the business track website enquiries, quote requests, lead status, follow-ups, enquiry source, and product category performance.

2. Scope

This is a Phase 2 future enhancement wireframe. It does not confirm that the dashboard has been technically built. It confirms the proposed reporting layout and business view required before dashboard development.

3. Users

Primary users are the Business Owner, Sales User, and Product Owner. The Business Analyst supports requirement validation and acceptance criteria review.

Pending Follow-ups	Count of enquiries not yet closed and needing action
Conversion Rate	Converted leads divided by total quote requests
Top Categories	Most requested product categories by enquiry/quote count
Monthly Trend	Number of enquiries by month

6. Data and Compliance Notes

Area	Note
Data source	Expected source is future SQL data for customers, enquiries, quote requests, product categories, lead status, follow-up notes, enquiry source, and newsletter subscription.
Refresh expectation	Daily refresh is enough for a small business. Real-time refresh is not required for Phase 2 requirements.
Access consideration	Dashboard access should be limited to authorised business users. Customer contact details may need masking depending on agreed policy.
Data quality	Missing contact details, duplicate leads, invalid status values, and missing follow-up dates should be highlighted before dashboard use.
Compliance note	Personal data use, retention, export, and newsletter consent reporting should be confirmed by the Business Owner or relevant advisor.

7. Acceptance Criteria

- Dashboard wireframe includes required KPIs and filters.
- Wireframe supports enquiry, quote request, category, lead status, follow-up, and source reporting.
- Wireframe avoids personal data exposure unless access control and masking are confirmed.
- Wireframe is linked to SQL data requirements and logical data relationship diagram.
- Business users can understand what the future Power BI dashboard will show.

8. Portfolio Note

This wireframe can be shown under Phase 2: SQL and Power BI Reporting Enhancement. Clearly mention that it is a future enhancement requirement artefact, not a fully delivered production dashboard.

9. BA Interview Explanation

I prepared a Power BI dashboard wireframe to translate reporting requirements into a simple visual layout. It showed KPIs, filters, trend chart, category analysis, lead status summary, pending follow-up tracker, and enquiry source breakdown. This helped business users validate what they expected from the future dashboard before technical build.
