Portfolio: singhsatyam85-cloud.github.io/Business-Analyst-portfolio

Business Analyst

Detail-oriented and solutions-driven professional with hands-on experience in business analysis, digital transformation, process improvement, and technology delivery across manufacturing, education, and digital solutions. Proven ability to analyse business challenges, understand user workflows, and translate business needs into clear requirements, As-Is/To-Be process maps, business rules, user stories, acceptance criteria, and UAT. Experienced partnering with stakeholders, end users, vendors, developers, and data teams throughout the full project lifecycle using Agile methodologies. Skilled in requirements elicitation, stakeholder management, process mapping, SQL, Power BI, API integration, data validation, and solution documentation. Experienced supporting digital products, business intelligence, predictive analytics, and AI-enabled solutions.

- Business Analysis & Requirements Elicitation
- Stakeholder Management & Communication
- Prototyping & MVP Creation Using AI Tools
- Solution Validation & Gap Analysis
- Digital Transformation & Automation
- Process Modeling & Workflow Design
- User Stories & Acceptance Criteria
- Agile & Scrum Methodologies
- User Acceptance Testing (UAT)
- Data Analysis, SQL & Power BI
- Process Improvement
- Business Intelligence

Career Experience

Ckay Solution Limited, United Kingdom | May 2026 – Present

Business Analyst

Drive business analysis activities for digital transformation initiatives by translating business needs into scalable technology solutions and optimising operational processes across digital products and analytics platforms. Partner with business leaders, product owners, developers, and data teams to elicit requirements, define functional specifications, and improve customer and operational workflows. Produce process documentation, establish business rules, validate reporting accuracy, and support Agile delivery from discovery through implementation.

- Architected the business requirements for the AutoInsight MVP, defining eight customer journeys and business rules that eliminated requirement gaps prior to development and generated 20 customer enquiries and quotation requests per week.
- Established the SQL reporting framework and verified eight KPI measures and four Power BI visuals, uncovering and resolving 6 data and calculation discrepancies before production, improving reporting accuracy and stakeholder confidence.
- Spearheaded business analysis for the MarketLens machine learning initiative by defining training datasets, field mappings, API integrations, and explainability requirements to deliver the project's minimum viable product (MVP), enabling underwriters to confidently interpret AI-generated quotation scores while establishing the foundation for the ongoing solution.

Career Break – MBA Studies & Professional Development | London, United Kingdom | Jan 2025 – Apr 2026

Cultivated strategic business knowledge and professional expertise through postgraduate education and specialised certifications in business analysis, Agile delivery, and technology consulting. Completed graduate studies while strengthening leadership, digital transformation, stakeholder management, and consulting capabilities applicable to enterprise technology projects.

- Earned a Master of Business Administration (MBA) from Middlesex University, enhancing expertise in strategic management, organisational leadership, and business operations.

FeelTech Digiviation Pvt Ltd, Gujarat, India | Dec 2023 – Dec 2024

Business Analyst

Delivered business analysis for education technology solutions by gathering requirements, improving operational workflows, coordinating testing activities, and supporting implementation of web and mobile applications. Partnered with clients, technical teams, and project stakeholders to document business processes, define functional requirements, and ensure technology solutions aligned with business objectives.

- Directed the transition from paper-based attendance to role-based web and mobile workflows across 6 educational institutions, modernising attendance management and improving operational efficiency.

- Defined requirements, user journeys, user roles and acceptance criteria for the Android and iOS versions of the attendance application, and created a mobile prototype for stakeholder review and validation.
- Designed interactive attendance dashboards featuring daily and monthly reporting, absence monitoring, and role-based access controls, eliminating 4–6 hours of manual reporting each week for teachers and administrators.
- Completed User Acceptance Testing by developing 21 test scenarios across two platforms, identifying seven defects that were resolved prior to production deployment.

Jindal Stainless Ltd, Odisha, India | Nov 2017 – Nov 2023

Associate Manager

Led business process analysis and operational improvement initiatives supporting large-scale manufacturing automation, production optimisation, vendor collaboration, and performance management. Collaborated with plant leadership, engineering teams, and technology vendors to document business requirements, redesign production processes, validate automation solutions, and monitor operational performance.

- Identified a critical production bottleneck and introduced a consolidated operator control process that generated approximately £0.57M in annual operating cost savings.
- Executed simulation-based validation and pre-production testing, exposing 15 process, usability, and data-tracking issues that were resolved before system deployment, minimising implementation risk.
- Developed KPI reporting and production performance analytics that uncovered process optimisation opportunities delivering approximately £1.1M in annual operating cost savings.
- Received the Star Award (2021) for driving productivity and the Idea Champ Award for advancing manufacturing quality.

India Steel Works Ltd, Mumbai, India | Mar 2016 – Nov 2017

Executive

Supported manufacturing operations by analysing production performance, monitoring quality metrics, and providing operational insights that informed continuous improvement initiatives. Collaborated with production and quality teams to evaluate operational trends, prepare performance reports, assess process efficiency, and support corrective action activities.

- Produced benchmarking analyses comparing historical and current production metrics, enabling management to prioritise targeted process improvement initiatives.
- Strengthened quality assurance efforts by evaluating out-of-specification events, monitoring process variances, and supporting corrective action tracking to improve manufacturing consistency and compliance.

Education

Master of Business Administration (MBA), Middlesex University, London, UK (Completed Feb 2026)

B.Tech, Metallurgy & Material Engineering, National Institute of Technology, Srinagar, India (Completed in 2015)

Certifications

PwC US Technology Consulting Job Simulation (Forage): created a discovery workshop guide, business user stories, MVP roadmap and executive summary for an ERP compliance and SOX controls system upgrade.

Professional Certificate in Agile Project Management — Atlassian

Business Analysis A to Z Masterclass — Udemy

Business Analysis for Project Managers — International Institute of Business Analysis

Technical Proficiencies

BA Methods: Requirements Elicitation, BRD/FRD, User Stories, Acceptance Criteria, Gap Analysis, Requirements Traceability, Process Mapping (As-Is/To-Be), UAT, BPMN, Agile/Scrum, Stakeholder Management, API

Tools: SQL, Power BI, Jira, Confluence, Lucidchart, Excel, Python

AI Tools: Claude code, ChatGPT (Codex), n8n, Power BI Copilot, Antigravity IDE
