

As-Is Process Flow

Project Name

Digital STEM Content Delivery Platform

Document Purpose

This document explains the current process used by ABC School before implementing the Digital STEM Content Delivery Platform.

Current Process Summary

ABC School currently has initial teacher mobile access, but there is no structured teacher web portal for classroom screen usage. Teachers do not have a central STEM and Coding library with proper filters by class, subject and topic. Content approval is not managed through a clear system workflow.

Current As-Is Flow

Step	Current Activity	Role Involved	Current Issue
1	Teacher identifies a difficult STEM or Coding topic for classroom explanation	Teacher	Topic need is not captured in a structured system
2	Teacher searches for available content through existing mobile access or shared content source	Teacher	Content may not be easy to find for classroom use
3	Teacher checks whether the content is suitable for class and topic	Teacher	Content metadata is not properly structured
4	Teacher may ask Admin or Subject Teacher for suitable content	Teacher / Admin / Subject Teacher	Process depends on manual communication
5	Admin checks available content details manually	Admin Staff	No proper content management workflow
6	Content approval is discussed manually with Subject Teacher or Principal	Subject Teacher / Principal	No clear Draft, Under Review, Approved or Inactive status
7	Teacher opens content for classroom explanation	Teacher	Content may not open in a clean classroom display mode
8	Content is shown to students on classroom screen, projector or smart board	Teacher	Display may include unnecessary controls or poor layout
9	Feedback is shared informally after classroom usage	Teacher / Principal	Feedback is not properly linked to content records

As-Is Process Flow Diagram

As-Is Process Flow: Current STEM Content Access Process

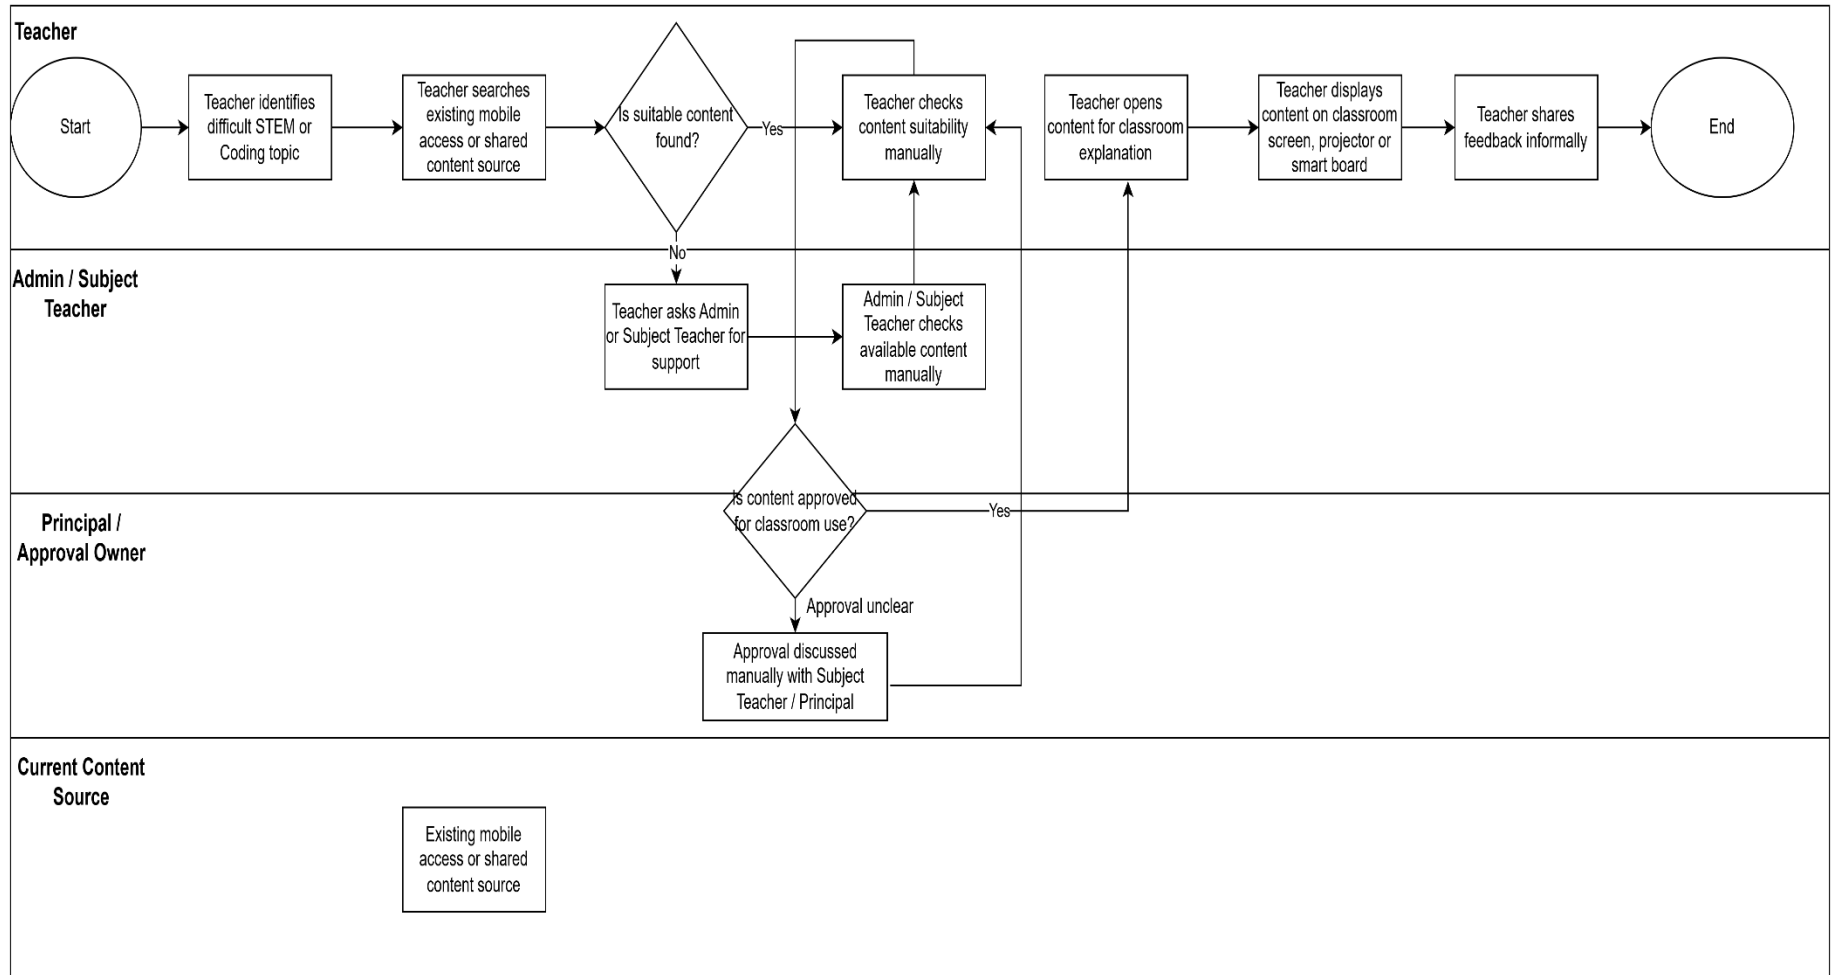

Figure 1: Current STEM Content Access Process

Current Pain Points

Pain Point ID	Pain Point
P01	No dedicated teacher web portal for STEM and Coding classroom content
P02	Content is not organised properly by class, subject and topic
P03	Teacher may take extra time to find the right content
P04	Content approval process is manual and unclear
P05	Teachers may not know whether content is approved or inactive
P06	Admin does not have a proper content management workflow
P07	Classroom display mode is not available in a clean full screen format
P08	Content feedback is informal and difficult to track
P09	Subject wise content requirement is not captured in a standard format
P10	3D / Animation / Content Team does not receive a standard Content Requirement Brief

Current Roles Involved

Role	Current Involvement
Teacher	Finds and uses content for classroom teaching
Admin Staff	Helps manage or locate content details
Subject Teacher	Gives academic input informally
Principal	Provides approval or direction manually

Content Team	Creates content based on available inputs
Business Analyst	Captures current process and identifies gaps

Key Gaps Identified

1. No structured STEM and Coding content library
2. No standard content metadata
3. No clear approval workflow
4. No role based access for Teacher, Admin and Principal
5. No proper classroom display mode
6. No standard Content Requirement Brief for the Content Team
7. No clear visibility of content status
8. No proper filter by class, subject and topic

Impact of Current Process

The current process can delay classroom preparation because teachers may spend extra time finding suitable content. Content quality and approval visibility may also be unclear. This creates the need for a structured teacher led web platform.
