

Content Storyboard / Scene Flow

Digital STEM Content Delivery Platform

Project Details

Field	Details
Project Name	Digital STEM Content Delivery Platform
Client	ABC School
Document Type	Content Storyboard / Scene Flow
Prepared By	Business Analyst
Version	1.0
Date	000000

1. Document Purpose

This document explains the high-level storyboard and scene flow for selected STEM and Coding content items. It helps the Business Analyst communicate content requirements to the Product Owner, Subject Teachers, 3D / Animation / Content Team, Developer Team and QA Tester before content creation starts.

2. Document Inputs

- Approved Content Requirement Brief
- Approved Learning Objective Matrix
- Functional Requirements Document
- Business Rules Document
- Role and Permission Matrix
- Subject Teacher / SME input

3. Storyboard Scope

This storyboard covers selected first-release content items for teacher-led classroom delivery. It is not a final animation script. It is a Business Analyst level scene flow that explains what each scene should communicate, what visual elements should appear, and how the content should be validated.

4. Storyboard Field Guide

Field	Meaning
Scene No.	Sequential scene number for the content item.
Scene Purpose	What the scene should teach or explain.
Visual / Interaction	What the learner should see on screen.
Teacher Note	How the Teacher may use the scene during classroom explanation.
Validation Check	What the Subject Teacher / SME should confirm before approval.

5. Content Item 1: H₂O Molecule

Field	Details
Content ID	CSF-01
Class Level	Class 6 / 7
Subject	Chemistry
Topic	H ₂ O Molecule
Content Type	3D Video / Interactive 3D
Learning Objective	Teacher should explain that a water molecule has two hydrogen atoms and one oxygen atom with a basic bond structure.
Approval Owner	Chemistry Subject Teacher / SME

Scene	Scene Purpose	Visual / Interaction	Teacher Note	Validation Check
1	Introduce water molecule	Show title: H ₂ O Molecule. Display one oxygen atom and two hydrogen atoms separately.	Teacher introduces the topic and asks students what H ₂ O means.	Atom names should be correct and readable.
2	Show molecule formation	Move two hydrogen atoms towards oxygen	Teacher explains two hydrogen atoms	Must show two hydrogen atoms and

		and form simple H-O bonds.	combine with one oxygen atom.	one oxygen atom only.
3	Label structure	Display labels: Oxygen, Hydrogen, H-O bond and H ₂ O molecule.	Teacher points to labels and explains basic bond structure.	Labels must be visible on projector or smart board.
4	Rotate 3D view	Rotate the molecule slowly to show 3D structure.	Teacher uses rotation to explain that molecules can be viewed from different angles.	Rotation should not distort atom count or labels.
5	Summary view	Show final labelled H ₂ O molecule with short summary text.	Teacher summarises key learning before moving to next topic.	Summary should match learning objective.

6. Content Item 2: Electric Circuit

Field	Details
Content ID	CSF-02
Class Level	Class 7 / 8
Subject	Physics
Topic	Electric Circuit
Content Type	Animated Video / Interactive Web Content
Learning Objective	Teacher should explain simple circuit components and show the difference between open and closed circuit.
Approval Owner	Physics Subject Teacher

Scene	Scene Purpose	Visual / Interaction	Teacher Note	Validation Check
1	Introduce circuit parts	Show a simple circuit layout with cell, wire, switch and bulb.	Teacher introduces each component before explaining current flow.	All component labels must be correct.
2	Show open circuit	Switch is open. Bulb remains off. Current path is incomplete.	Teacher explains why electricity cannot flow in an open circuit.	Open circuit behaviour must be scientifically correct.
3	Show closed circuit	Switch closes. Current direction is shown using arrows. Bulb glows.	Teacher explains complete path and current flow.	Closed circuit and current direction must be clear.
4	Compare open vs closed	Split screen shows open circuit and closed circuit side by side.	Teacher asks students to identify the difference.	Comparison must be simple and classroom-readable.
5	Summary view	Show key points: closed switch completes circuit, open switch breaks circuit.	Teacher concludes the circuit explanation.	Summary must match class-level understanding.

7. Content Item 3: If-Else Logic

Field	Details
Content ID	CSF-03
Class Level	Class 7 / 8
Subject	Computer Science
Topic	If-Else Logic
Content Type	Coding Simulation
Learning Objective	Teacher should explain decision-making logic using a simple condition, true path, false path and output.
Approval Owner	Computer Science Subject Teacher / SME

Scene	Scene Purpose	Visual / Interaction	Teacher Note	Validation Check
1	Introduce decision logic	Display a simple question: Is score $\geq$ 40?	Teacher explains that programs can make decisions using conditions.	Condition should be simple and age-appropriate.
2	Show true path	If score is 55, simulation follows true path and displays Pass.	Teacher explains true result when condition is satisfied.	Output must match condition.
3	Show false path	If score is 30, simulation follows false path and displays Try Again.	Teacher explains else result when condition is not satisfied.	False path must be correct.
4	Show code view	Display simple if-else pseudocode with highlighted condition and output.	Teacher connects visual flow to coding logic.	Code should be simple and readable.
5	Summary view	Show condition, true branch, false branch and output together.	Teacher summarises the structure of if-else logic.	Summary must match learning objective.

8. General Scene Flow Acceptance Criteria

- Scene flow must match the approved learning objective.
- Visual labels must be readable on classroom screen, projector or smart board.
- Content must be academically validated by Subject Teacher or SME.
- Content must not include unnecessary editing, Admin or approval controls in classroom display mode.
- Content should open correctly through the web portal before being marked Approved.
- Content must remain hidden from Teachers until it is Approved.
- 9. BA Communication Plan for Storyboard Review

Stakeholder	Business Analyst Communication
Product Owner / Principal	Confirm content priority and classroom value for first release.
Subject Teacher / SME	Confirm learning accuracy, labels, examples and validation criteria.
3D / Animation / Content Team	Share scene purpose, visual expectations, labels and output format.
Developer Team	Confirm file/link format and classroom display launch behaviour.
UI/UX Designer	Confirm how content details and classroom display mode should appear.
QA Tester	Share scene-level acceptance checks for content validation.

10. Assumptions

- This document provides BA-level scene flow, not final creative animation script.
- Content Team will refine visual style, timing and animation detail during production.
- Subject Teacher or SME will validate academic accuracy before content approval.
- Developer Team will confirm supported launch format for classroom display mode.
- Release 1 focuses only on teacher-led classroom display.

11. Dependencies

Dependency ID	Dependency	Owner
DEP-01	Final validation of subject-specific content accuracy.	Subject Teacher / SME
DEP-02	Confirmation of animation or simulation production feasibility.	3D / Animation / Content Team
DEP-03	Confirmation of supported file/link format in the web portal.	Developer Team
DEP-04	Product Owner confirmation of first-release content priority.	Principal / Product Owner
DEP-05	Teacher availability for classroom readability validation.	Principal / Product Owner

12. Next Step

After this Content Storyboard / Scene Flow is reviewed, the Business Analyst will prepare user stories, acceptance criteria and the initial Product Backlog for Sprint 1 and Sprint 2 planning.
